Overview & Current Events

Tracing its roots back to Thomas Edison in the 1870's, General Electric is a \$78.3 billion diversified manufacturer headquartered in Boston, MA. The company operates in five segments: Power, Renewable Energy, Aviation, Healthcare and Capital. General Electric continues to work through a major transformation. The company has taken a variety of actions to de-leverage its balance sheet including reducing the quarterly dividend, accelerating the sell down of Baker Hughes (to be fully monetized in two years) and selling industrial and capital assets. Previously GE sold Biopharma and GE Transportation.

On October 25th, 2022, General Electric released Q3-2022 results for the period ending September 30th, 2022. Revenues came in at \$19.1 billion for the quarter, up 3% compared to Q3-2021. While aviation and healthcare revenues grew by 24% and 6%, renewable and power revenues declined by 15% and 12%, respectively. Aviation should continue to drive the company's top line in the upcoming quarters, with its orders growing 6% to \$7.3 billion.

Adjusted operating margin contracted 160 basis points, driven lower mostly due to increased warranty pressures, inflation, and lower demand in the company's renewable energy segment. In fact, the renewable segment is expected to record a loss of around \$2 billion this year. Accordingly, on an adjusted basis, earnings-per-share equaled \$0.35 compared to \$0.53 in the prior-year period.

General Electric lowered its prior 2022 outlook. The company still expects organic revenue growth in the high-single-digit range, adjusted organic profit margin to expand by 125 to 150 basis points (previously 150+), and adjusted earnings-per-share of \$2.40 to \$2.80 (previously \$2.80 to \$3.50).

Growth on a Per-Share Basis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
EPS	\$10.36	\$10.21	\$12.12	(\$4.94)	\$6.05	(\$8.24)	(\$21.0)	(\$4.99)	\$4.63	(\$6.16)	\$2.60	\$6.47
DPS	\$5.60	\$6.32	\$7.12	\$7.36	\$7.44	\$6.72	\$2.96	\$0.32	\$0.32	\$0.32	\$0.32	\$0.52
Shares²	1,320	1,286	1,265	1,252	1,141	1,085	1,086	1,090	1,097	1,099	1,099	1,000

GE's growth history leaves much to be desired. Earnings for 2018 and 2019 came in much lower than the company's performance during the last recession, and the company's 2020 pandemic performance was especially poor. General Electric's plans to transform portions of its business, including spinning off its healthcare business, paying down debt, and continuing to sharpen its focus, are generally positive.

However, we are cautious in that it is difficult to cut your way to growth. The company reduced its long-term borrowings from \$70.1 billion to \$30.8 billion during FY-2021, which is admittedly impressive, nonetheless. This has positioned the company to achieve free cash flow of around \$4.5 billion in 2022 and hopefully a further increase in 2023.

Consequently, we expect GE to grow EPS by a CAGR of 20% from a \$2.60 adjusted EPS base moving forward. We have also utilized a DPS CAGR of 10% in the medium term, though DPS hikes are highly speculative based on GE's current priority board.

Valuation Analysis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	Now	2027
Avg. P/E	13.3	14.7	15.7	20.3	20.4	24.8	19.8	15.2	10.79	---	27.5	16.0
Avg. Yld.	3.5%	3.3%	3.4%	3.4%	3.0%	3.2%	2.9%	0.4%	0.6%	0.3%	0.4%	0.5%

Over the past decade, General Electric's P/E ratio has averaged 17.2 times earnings. We believe that a multiple of 16 times earnings would be appropriate in the medium-term following the company's restructuring efforts and current market environment. Shares trade at 27.5 times this year's expected adjusted EPS, which could be reasonable considering that EPS is expected to grow substantially in the medium-term. That said, it still implies a natural valuation headwind. The company's current dividend is a negligible \$0.08 per quarter – hence the small yield.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
Payout	54%	62%	59%	---	123%	---	---	---	7%	---	12%	8%

GE has competitive advantages in its Aviation and Healthcare segments, as it offers a best-in-breed product that tends to create sticky customer relationships. However, the problem is that the other segments do not enjoy the same type of advantages. Despite the noteworthy recovery in the aviation segment, the renewables and power segments continue to underperform.

During the last recession, GE posted earnings-per-share of \$17.60, \$14.24, \$8.24, and \$9.20 for the 2007 through 2010 stretch and cut its dividend. Then, it faltered again, seeing earnings of \$12.12 in 2014 erode to losses of (\$21.00) in 2018 and (\$4.99) in 2019, while the dividend was cut again. This is not just a cautionary tale but an example to remember – even the seemingly best businesses in the world can falter. Still, there are positives. Income investors do not welcome the dividend cuts, but they do make it easier to refocus the company's profits on fixing the business. Moreover, we are encouraged by GE's acknowledgment and plans to attack the debt load at every angle. Still, time will tell whether or not adequate progress is being made.

Final Thoughts & Recommendation

GE has gone from being a storied business, admired for its industrial conglomerate might, to hoping to be a turn-around story. While there are some bright spots in the deleveraging story, there are too many unknowns to be enthused about. Total return potential comes in at 8.1% per annum, stemming from strong EPS growth expectations and a 0.4% dividend yield, offset by a significant valuation headwind. Should GE regain its footing and beats our growth estimates, shares could be attractive as the “snap back” effect related to growth, valuation, and the dividend could be substantial. Still, that is guesswork at this point. We rate General Electric a hold and note that its investment case is highly speculative.
