Overview & Current Events

Steel Dynamics is the youngest of America's major steel producers. It was founded in Indiana in 1993 and completed its IPO in 1996. It is one of the largest domestic steel producers, with annual production capacity of approximately 13 million tons and a market capitalization of \$15.8 billion.

The coronavirus crisis severely hurt the demand for steel due to its impact on the automotive industry. Consequently, a great portion of high-cost steel production was idled. However, when the economy reopened, the demand for steel recovered swiftly. Even better for steel producers, thanks to extremely low steel inventory levels, flat rolled steel prices rallied to all-time highs last year. Flat rolled steel prices have corrected lately but they are likely to remain above-average in the upcoming quarters, given the sustained demand from automakers and renewable energy projects.

In mid-October, Steel Dynamics reported (10/19/22) financial results for the third quarter of fiscal 2022. Thanks to the aforementioned tailwind from pent-up demand for steel, Steel Dynamics posted all-time high steel shipments of 3.2 million tons but sales dipped -8% vs. the record sales reported in the previous quarter due to lower prices. As a result, adjusted earnings-per-share decreased -19% sequentially, from an all-time high of \$6.73 to \$5.46, but exceeded the analysts' consensus by \$0.30.

Steel prices have corrected lately and ferrous scrap prices have decreased for six consecutive months due to concerns over global economic growth. However, Steel Dynamics expects to keep thriving this and next year thanks to nearly all-time high backlog and sustained demand from automotive, construction and industrial sectors. We still expect record earnings this year, but we expect steel prices to normalize beyond this year, as global supply is likely to grow.

Growth on a Per-Share Basis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
EPS	\$0.75	\$0.83	\$1.35	\$0.74	\$1.92	\$2.65	\$5.40	\$3.04	\$2.84	\$16.09	\$21.00	\$4.50
DPS	\$0.40	\$0.44	\$0.46	\$0.55	\$0.56	\$0.62	\$0.75	\$0.96	\$1.00	\$1.04	\$1.36	\$1.78
Shares²	219.5	222.9	241.4	243.1	243.8	237.4	225.3	214.5	212.1	198.8	180.0	150.0

Commodity producers are usually highly cyclical stocks, as their earnings are very sensitive to the dramatic swings of commodity prices. When prices are high, producers boost their production, which eventually results in an oversupplied market and a plunge in prices. This cyclical behavior is clearly reflected in the above table, which depicts the volatile performance record of Steel Dynamics.

On the bright side, Steel Dynamics has worked to broaden its product portfolio with high-quality steel products and expand its market diversity. As a result, it has consistently achieved a much higher utilization rate (80%-90%) in its steel mills when compared to the industry average (70%-80%). It has also pursued growth via some acquisitions. Overall, it has grown its earnings-per-share at a 9.8% average annual rate over the last decade, excluding the blowout year 2021. We view the earnings of 2021-2022 as abnormal and use earnings-per-share of \$4.50 as a base for our calculations of potential future returns. We expect Steel Dynamics to earn approximately \$4.50 per share in 2027 as well.

Valuation Analysis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	Now	2027
Avg. P/E	17.4	19.4	14.6	26.1	13.1	13.6	8.2	10.5	10.2	3.5	19.1	11.1
Avg. Yld.	3.1%	2.7%	2.3%	2.8%	2.2%	1.7%	1.7%	3.0%	3.5%	1.8%	1.6%	3.6%

Due to its cyclical nature, Steel Dynamics trades at low price-to-earnings ratios when it enjoys great profits and at high earnings multiples during rough periods. Steel Dynamics has rallied 65% in about nine months and is now trading at 19.1 times its “normal earnings”, which is much higher than the 10-year average of 13.7. Due to the high cyclical nature of the stock, we assume a fair price-to-earnings ratio of 11.1, which is the 5-year average of the stock. If the stock reaches our fair value estimate, it will incur a -10.3% annualized drag in its returns over the next five years.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
Payout	53%	53%	34%	74%	29%	23%	14%	32%	35%	6%	30%	40%

Steel Dynamics has raised its dividend for 10 consecutive years, but it is offering a lackluster 1.6% dividend yield. Due to the cyclical nature of its business, it is not suitable for income-oriented investors. Fortunately, the company has a strong balance sheet, which is paramount during downturns, such as the collapse of commodity prices in 2015. Steel Dynamics is also better than its average peer thanks to its high-quality products, which somewhat differentiate the company from its peers. The company has also posted strong free cash flows in every single year in the last decade. Steel Dynamics is one of the highest-quality steel producers, but it is not immune to the cyclical nature of its industry.

Final Thoughts & Recommendation

Steel Dynamics has rallied 65% off its bottom in January thanks to its impressive business momentum amid strong steel prices but supply is likely to gradually normalize in the upcoming years. As a result, the stock could offer a -7.6% average annual total return over the next five years, as its 1.6% dividend could be offset by a -10.3% annualized valuation drag. The stock receives a sell rating.
