Overview & Current Events

Seagate Technologies is a technology company that offers data storage products and data storage solutions to its customers. Its portfolio includes hard disk drives, solid state hybrid drives, solid state drives, storage subsystems and computing solutions. Seagate Technologies was founded in 1978, is headquartered in Dublin, Ireland.

Seagate Technologies reported its first quarter (fiscal 2023) earnings results on October 26. The company generated revenues of \$2.0 billion during the quarter, which represents a decline of 35% compared to the prior year's quarter. Seagate Technologies missed the consensus analyst estimate, unlike during the previous quarters, when Seagate mostly outperformed expectations. Seagate's year-over-year performance also declined sequentially, as the year-over-year decline had been smaller in the previous quarter.

Seagate Technologies' earnings-per-share totaled \$0.48 during the first quarter, which was well below what the analyst community had expected. Earnings-per-share declined by 80% versus the previous year's quarter, during which the company had earned \$2.35 on a per-share basis. Seagate Technologies also saw its cash flow generation decline compared to the previous year's period and on a sequential basis, as operating cash flow totaled \$250 million during the period. The company still bought back shares at a meaningful pace, spending \$410 million on share repurchases during the quarter. Management is forecasting that the current quarter, Q2 2023, will see revenues coming in at a midpoint of \$1.9 billion, which would be below the level seen in the most recent quarter. Analysts are predicting that this revenue deceleration will result in a hefty earnings-per-share decline this year.

Growth on a Per-Share Basis

Year	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2028
EPS	\$5.31	\$5.04	\$4.57	\$2.26	\$4.12	\$5.52	\$4.82	\$4.95	\$5.64	\$8.18	\$2.20	\$3.09
DPS	\$1.40	\$1.67	\$2.05	\$2.43	\$2.52	\$2.52	\$2.52	\$2.60	\$2.68	\$2.80	\$2.80	\$3.17
Shares¹	359	327	315	299	292	287	278	260	233	217	210	200

Seagate Technologies' profitability varied widely over the last decade, from a small net loss during the last financial crisis up to record profits in 2012. The company's overall performance has been quite inconsistent in the past.

Following Seagate Technologies' strong earnings growth in calendar year 2018, 2019 was a down year for the company, due to generally weaker chip and memory markets. Things started to improve during the last couple of quarters, though, and 2020 was a more profitable year. In the past, Seagate Technologies has lowered its operating expenses in order to grow its profits. It is, however, unclear whether the company can continue to lower its R&D and sales expenses without hurting revenue growth in the long run. We believe that it is prudent to assume that more expense cutting will be harder to achieve moving forward, margins will thus not grow much in the future. Over the coming years, Seagate Technologies should benefit from demand growth for storage products. Over the last five years, demand for Nearline HDDs, an intermediate type of data storage that makes up roughly half of Seagate Technologies' HDD sales, rose by 35% annually. Tailwinds such as the IoT result in a positive long-term sales growth outlook. Analysts are currently forecasting a big profit decline for fiscal 2023, but profits should grow meaningfully beyond 2023 from this lower basis.

Valuation Analysis

Year	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	Now	2028
Avg. P/E	6.3	9.9	12.9	15.8	9.6	10.1	10.0	9.7	15.6	8.7	23.2	10.0
Avg. Yld.	4.2%	3.4%	3.5%	6.8%	6.4%	4.4%	5.3%	5.4%	3.0%	3.9%	5.5%	10.3%

Seagate Technologies has been valued at a price-to-earnings multiple that has moved in a very wide range. Today, shares are trading for a little more than 23 times forecasted 2023 net profits, which is way ahead of our fair earnings multiple estimate. We therefore believe that multiple compression will be a major headwind going forward.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2028
Payout	26.4%	33.1%	44.9%	108%	61.2%	45.7%	52.1%	52.1%	47.5%	34.2%	127%	103%

Seagate Technologies has paid growing or stable dividends since 2011. Since then, the dividend payout ratio has moved in a very wide range of as low as 13% to more than 100%. Right now, based on analyst estimates for this year's earnings-per-share, the company will pay out more than its net profits via dividends. Since cash flow oftentimes is higher than reported net profit at Seagate, the dividend could still be sustained.

Seagate Technologies is one of the largest data storage companies in the world. It therefore is a major player in this relatively narrow, focused industry. Due to consolidation over the last few years, the industry has turned into an oligopoly, which has been beneficial for margins, and which limits competitive threats. Demand for storage products, and especially the prices for Seagate's products can be cyclical, which is why profits have been quite volatile in the past. Seagate Technologies' business will, in all likelihood, always be cyclical, which is why investors should assume that share prices can be quite volatile, although it should be noted that Seagate has weathered the coronavirus crisis well.

Final Thoughts & Recommendation

The long-term outlook for Seagate Technologies is not too bad, as the amount of data that is recorded and that needs to be stored continues to rise rapidly around the globe. The company's results will always be cyclical, which makes Seagate's shares volatile. The company is experiencing a considerable downturn in its end markets right now, which is why shares do not promise compelling returns at all. We rate Seagate Technologies a sell.
