Overview & Current Events

Eni is a major oil and gas producer based in Italy. It has exploration activity in more than 40 countries and trades with a market capitalization of \$45.5 billion. It operates in four segments: exploration & production, gas & LNG, refining & marketing and plenitude & power. Its upstream segment is by far the largest. In 2018, 2019 and 2021, this segment generated 92%, 93% and 89% of total operating income, respectively. This is a major difference between Eni and the other energy super majors; Eni's business is much less diversified.

Eni faced a downturn due to COVID-19 in 2020 and cut its dividend by -34%. However, it is thriving now thanks to the prices of oil and gas, which have rallied to multi-year highs thanks to the sanctions of western countries on Russia.

In late October, Eni reported (10/28/22) financial results for the third quarter of fiscal 2022. Its production slipped -2% sequentially due to planned and unplanned outages while the price of oil and the refining margins somewhat moderated from blowout levels in the previous quarter. However, the price of European gas skyrocketed to an all-time high due to the aforementioned sanctions and thus Eni maintained essentially flat earnings-per-share (€1.06) vs. the 10-year high of €1.07 in the second quarter. Thanks to its nearly pure upstream nature, Eni greatly benefits from the high prices of oil and gas. It is also likely to keep thriving during the winter, as it plans to replace half of Russian gas flows. We have thus raised our annual forecast from \$5.10 to \$6.00. Nevertheless, we expect oil and gas prices to deflate beyond this year.

Growth on a Per-Share Basis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
EPS	\$2.98	\$4.14	\$1.27	-\$4.90	-\$0.65	\$2.12	\$2.76	\$1.79	-\$0.51	\$2.96	\$6.00	\$2.82
DPS	\$2.40	\$2.89	\$2.61	\$2.13	\$1.79	\$1.91	\$1.89	\$1.86	\$1.23	\$1.58	\$1.80	\$1.94
Shares¹	1,811	1,811	1,805	1,801	1,801	1,801	1,794	1,820	1,789	1,778	1,760	1,700

Eni expects to grow its output by approximately 3.5% per year on average until 2025. A major growth driver will be the Zohr field in Egypt, the largest gas field in the Mediterranean, which holds about 30 trillion cf of gas. Eni has a 50% stake in this field. Moreover, Eni is thriving thanks to the multi-year high prices of oil and gas, which have resulted primarily from the sanctions of western countries on Russia. Russia produces 10% of global oil and 31% of natural gas consumed in Europe. However, given the high comparison base formed by the high expected earnings this year, we expect a -14% average annual decline in earnings-per-share over the next five years. Notably, natural gas comprises 52% of the total production of Eni, which aims to raise this metric to 60% by 2030. As a result, Eni is more sensitive to the price of natural gas than the other oil majors, which produce more oil than gas.

Valuation Analysis

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	Now	2027

Eni SpA (E)

Updated November 4th, 2022 by Aristofanis Papadatos

Due to its blowout earnings expected this year, Eni is trading at a price-to-earnings ratio of only 4.5, which is much lower than its 10-year historical average of 12.5. If the stock trades at its average valuation level in five years, it will enjoy a 22.7% annualized gain in its returns, which will offset the expected -14% annual decline of earnings-per-share.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2027
Payout	80.5%	69.8%	206%	---	---	90.1%	68.5%	104%	---	53.4%	30.0%	68.7%

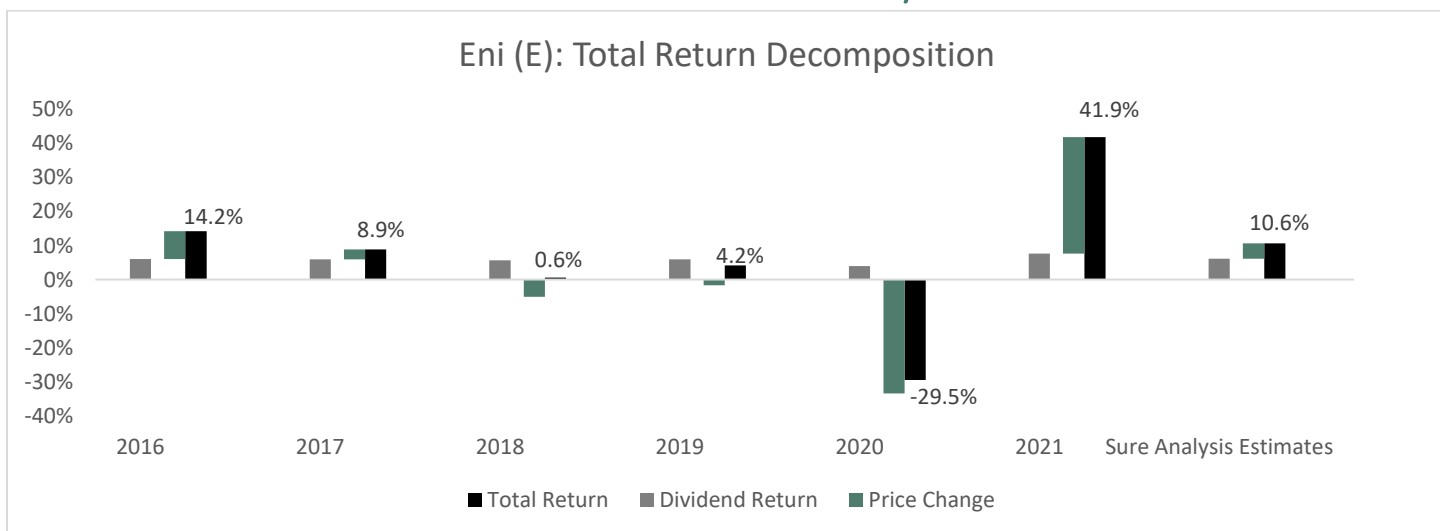

Due to its almost pure upstream focus, Eni suffered more than its peers in the downturn of the energy sector between 2014 and 2017. As a result, it reduced its dividend per ADR from €2.24 in 2014 to €1.60 in 2015. For comparison, during the downturn of the oil market between 2014 and 2017, the integrated oil majors, Exxon Mobil, Chevron, Royal Dutch Shell, Total and BP, saw their earnings plunge but none of them cut their dividend. Although BP and Shell cut their dividends amid the COVID-19 pandemic in 2020, along with Eni.

Eni posted a daunting 55% reserve replacement ratio in 2021 and thus it now has about 6.6 billion barrels of oil equivalent in proved reserves, which are sufficient for 10.8 years of production given the current production rate of the company. The duration of its reserves is lower than the ~12-year duration of the reserves of its peers. In addition, Eni has a breakeven point of about \$55 per barrel. This is much higher than the breakeven point of most oil majors, which have cut their expenses and reshaped their portfolios more drastically than Eni. For perspective, TotalEnergies and BP have driven their breakeven points to \$35-\$40. All the above help explain why the dividend of Eni is much more vulnerable than the dividends of its peers.

Final Thoughts & Recommendation

Thanks to its nearly pure upstream nature, Eni is thriving in the current environment of multi-year high prices of oil and gas. We expect oil and gas prices to deflate in the upcoming years, given their cyclical nature. The stock of Eni is cheap right now and could offer a 10.6% average annual return over the next five years thanks to its 6.7% dividend and a 22.7% valuation tailwind, which may be partly offset by a -14% annual decline of earnings-per-share. However, due to the highly cyclical nature of the upstream business, we are somewhat cautious over the long-term potential of Eni. We thus rate the stock as a hold. Those who want to benefit from high oil and gas prices might prefer TotalEnergies, which is equally cheap and more defensive than Eni.
