Overview & Current Events

National Grid plc is a diversified electricity and natural gas utility with operations in the UK and US. In the UK, National Grid owns and operates the electric and natural gas transmission network. In the US, the company serves 7.1 million electricity and natural gas customers in Massachusetts and New York. National Grid acquired Keyspan in 2007, entering the US market. It divested its UK natural gas distribution business in 2019. In 2022, it sold the Rhode Island electricity business. Today, the utility operates in five business segments: UK Electricity Transmission, UK Gas Transmission, US Regulated, National Grid Ventures (NGV), and Other. The stock trades on the LSE and as an ADR on the NYSE. The utility had revenue of over \$20.95B in FY2021¹.

National Grid reported half year results on November 10th, 2022. Companywide operating profit rose 50% to \$2,699M from \$1,798M and earnings per share soared 193% to \$0.37 from \$0.13 in comparable periods. Operating profits rose due to contributions from a strong UK Electricity Distribution performance, property sales, the North Sea Link, IFA1, and a stronger USD, but offset by the sale the Narragansett Electric Company. Operating profit for UK Electricity Transmission was down (-9%) to \$594M from \$652M, UK Electricity Distribution was up 86% to \$629M from \$339M, and UK ESO was up 192% to \$176M from \$60M on a year-over-year basis. US Regulated operating profit rose 186% in New England to \$868M from \$304M and fell (-108%) to (-\$31M) from \$387M in New York in the prior year. NGV and Other increased 717% to \$463M from \$57M in comparable periods because of joint venture starts.

In the UK, NGG is selling 60% of its Gas Transmission business to Macquarie Asset Management and British Columbia Investment Management Corporation, 50% of the St. Williams JV to The Berkeley Group, and the Millennium pipeline. In the US, the utility sold the Narragansett Electric Company in Rhode Island.

The utility invested ~\$8.4B to upgrade the WPD network, UK transmission, and a NY offshore wind JV in fiscal 2022. NGG plans to invest ~\$37B to ~\$44B through 2026 to drive mid-single digit asset and EPS growth.

Growth on a Per-Share Basis

Year ²	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2028
EPS	\$3.73	\$4.15	\$4.72	\$3.85	\$3.65	\$3.20	\$6.81	\$2.95	\$3.85	\$3.82	\$4.33	\$5.27
DPS	\$3.18	\$3.48	\$3.32	\$2.99	\$3.08	\$3.09	\$3.09	\$3.14	\$3.44	\$3.12	\$3.25	\$3.95
Shares³	685	693	700	703	695	693	695	680	696	729	736	774

National Grid's top and bottom line are facing diverging fortunes in the UK and US. In the UK, the utility had a large cut in base return on equity when the RIIO-2 price control mechanism took effect in April 2021. In the US, National Grid had historically lower returns of capital than in the UK. This will likely reverse after RIIO-2 due to declines in the UK and improving trends in the US. We are forecasting a 4% average annual increase in earnings-per-share and dividends. The dividend has grown in GBP but has been volatile for the US ADR after accounting for currency exchange rates. The payout ratio is elevated and there is risk of a dividend cut if earnings in the UK fall and are not offset by gains in the US.

¹ National Grid plc reports results in GBP. This report will use USD at the prevailing exchange rate.

² National Grid's fiscal year ends in March. The values in the tables are in fiscal year.

³ ADR share count in millions. One ADR equals five ordinary shares.

Valuation Analysis

Year	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	Now	2028
Avg. P/E	16.8	17.2	16.3	19.7	17.4	18.4	7.0	21.2	15.3	15.9	14.8	15.0
Avg. Yld.	6.2%	5.5%	4.8%	4.9%	4.8%	5.1%	4.9%	6.5%	4.9%	5.1%	5.1%	5.0%

National Grid's stock price is up since our last report. Our fair value estimate is a price-to-earnings ratio of 15X earnings, below the long-term average after we account for lower anticipated return on equity in the UK. We updated our earnings estimate. Our fair value estimate is \$65 per share. Our 5-year price target is \$79 per share.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2028
Payout	85%	84%	70%	78%	84%	96%	45%	106%	89%	82%	75%	75%

In the UK, National Grid owns and operates the electric and natural gas transmission network essentially giving it a monopoly. In the US, the utility has the advantages of most regulated utilities in that it is a monopoly in its service area. That said, National Grid is faced with a declining rate of return in the UK after April 2021 because of RII0-2. It is unlikely that efficiency incentives and inflation adjustments will make up the decline. There is also a risk of nationalization of transmission assets. In the US, National Grid faces risk from tough regulatory environments that could lead to low rates of return. Furthermore, US regulators do not allow inflation adjustments or efficiency incentives.

Long-term debt is now at \$55,021M offset by \$3,550M in cash, equivalents, and short-term investments. Interest coverage is 3.4x and the leverage ratio is elevated at about 7.2x.

Final Thoughts & Recommendation

At present we are forecasting an 8.7% annualized total return through FY 2028 from a dividend yield of 5.1%, 4.0% EPS growth, and 0.3% P/E multiple expansion. The utility acquired Western Power Division and will sell 60% of Gas Transmission in the UK. The Rhode Island operations and 50% of the St. William JV were sold. The dividend yield is high, but the payout ratio is elevated. We believe there is risk of a cut if earnings fall, and the payout ratio trends higher. At the current price, we rate this stock a hold.
