Overview & Current Events

Williams Companies is a leading U.S. provider of infrastructure related to natural gas. It has operations across the natural gas value chain, including gathering, processing, transportation and storage of natural gas and natural gas liquids. Williams owns and operates more than 30,000 miles of pipelines, including Transco, the largest pipeline in the U.S. Its operations handle approximately 30% of U.S. natural gas. The stock has a market cap of \$35.7 billion.

In early May, Williams reported (5/3/23) financial results for the first quarter of fiscal 2023. The company posted record gathering volumes of 17.85 Bcf per day, up 18% over the prior year's quarter, and 33% growth in transmission volumes. As a result, Williams grew its distributable cash flow (DCF) per share 21% over the prior year, posted a strong dividend coverage ratio of 2.65 and maintained a decent leverage ratio (net debt to EBITDA) of 3.57. Williams benefited from the contribution of recently completed growth projects. Thanks to its sustained business momentum, the company has raised its dividend by 5% this year.

The price of natural gas rallied last year due to the sanctions of Europe on Russia, which resulted in a deficient European gas market and hence the U.S. exported numerous LNG cargos to Europe. These exports greatly tightened the U.S. natural gas market. The price of natural gas has plunged lately, mostly due to warmer-than-average weather in the U.S. and Europe. However, Williams has limited exposure to the price of natural gas. Given also the recent completion of growth projects, we still expect Williams to grow its cash flow per share by almost 5% this year.

Growth on a Per-Share Basis

Year	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2028
CFS	\$2.01	\$2.35	\$2.86	\$2.95	\$2.73	\$2.37	\$2.72	\$2.76	\$3.34	\$4.02	\$4.20	\$5.11
DPS	\$1.44	\$1.96	\$2.45	\$1.68	\$1.20	\$1.36	\$1.52	\$1.60	\$1.64	\$1.70	\$1.79	\$2.18
Shares¹	683	747	749	750	826	1,210	1,214	1,215	1,218	1,223	1,228	1,300

The large share count increase of Williams in 2018 resulted from the acquisition of the remaining 24% stake of its MLP, Williams Partners, for \$10.5 billion in an all-stock deal. The deal simplified the company's operating structure.

As the performance of Williams is affected by the strength of the natural gas market, its performance record has been remarkably volatile. Nevertheless, Williams has grown its cash flow per share at an 8.0% average annual rate over the last decade. In addition, it benefits from the contributions of recently completed projects. Thanks to recent expansion projects, Williams has enhanced Transco's capacity from 17.2 million dekatherms to more than 18.0 million dekatherms per day in the winter heating season. Moreover, Williams benefits from the positive long-term trends of the natural gas market, including environmental policies towards cleaner fuels. North American demand for natural gas is expected to grow at a 4.6% average annual rate over the next five years. Furthermore, Williams enjoys a tailwind from the ongoing war in Ukraine, which has rendered the U.S. a critical producer for the global gas market. Nevertheless, investors should always be aware of the dramatic cycles of the price of natural gas. Given all the above factors, we expect Williams to grow its cash flow per share by about 4% per year over the next five years.

Valuation Analysis

Year	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	Now	2028
Avg. P/CF	17.7	20.8	16.0	7.9	10.8	11.6	9.4	7.1	7.6	8.2	6.9	7.5
Avg. Yld.	4.0%	4.0%	5.4%	7.2%	4.1%	5.0%	5.9%	8.1%	6.5%	5.1%	6.2%	5.7%

If we exclude the years 2013-2015, in which the depressed cash flows resulted in abnormally high price-to-cash flow ratios, Williams has traded at an average price-to-cash flow ratio of 8.9 over the last decade. Due to its cyclicity, we assume a fair multiple of 7.5 for this stock. Williams is currently trading at a price-to-cash flow ratio of 6.9. If it trades at our assumed fair valuation level in five years, it will enjoy a 1.7% annualized gain in its returns.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2028
Payout	71.6%	83.4%	85.7%	57.0%	44.0%	57.4%	55.9%	57.9%	49.1%	42.3%	42.6%	42.6%

Williams raised its dividend by 5% this year and it is now offering an attractive 6.2% dividend yield while it has a payout ratio of only 43%. As the company seems to be in a sustained recovery phase, its dividend can be considered safe for the foreseeable future. On the other hand, Williams was severely affected in the Great Recession and the downturn of the energy market that began in 2014. It cut its dividend in 2016. Furthermore, its current assets (\$2.8 billion) are lower than its current debt (\$4.0 billion), its interest expense consumes 30% of its operating income and its net debt of \$32.6 billion is nearly 7 times its annual distributable cash flows. If Williams faces a major downturn, it may cut its dividend.

Final Thoughts & Recommendation

Thanks to its focus on natural gas, Williams is fairly resilient to the secular transition from fossil fuels to clean energy sources. We expect the stock to offer a 10.8% average annual return over the next five years thanks to 4.0% growth, its 6.2% dividend and a 1.7% valuation tailwind. We thus rate the stock as a hold, though investors should be aware of its volatile performance record, its material debt load and its vulnerability to economic downturns.
