Overview & Current Events

Celanese Corporation is a global chemical and specialty materials company that engages in the production and sale of industrial chemicals. Celanese is one of the world's largest producers of acetic acid and its downstream chemicals, as well as methanol, carbon monoxide, and ethylene. The company also produces specialty polymers used in automotive, electronics, medical and consumer end markets. The company's reporting is split into advanced engineered materials, consumer specialties, industrial specialties, and acetyl intermediates. Celanese trades on the NYSE under the ticker symbol CE and has a market capitalization of \$14 billion. CE is headquartered in Dallas, Texas and has 13,000 employees.

On February 18th, 2022, Celanese announced the agreement to acquire a majority of the Mobility & Materials business of DuPont for \$11.0 billion. The deal marked Celanese as a major global specialty materials company and is anticipated to lead to a doubling of annual free cash flow generation. The acquisition was completed on November 1st, 2022.

On October 19th, 2022, Celanese declared a \$0.70 quarterly dividend, which was a 3% increase.

On February 23rd, 2023, Celanese announced it is forming a Food Ingredients joint venture with Mitsui. Celanese will contribute its Food Ingredients business to form a standalone Food Ingredients JV, of which Celanese will own 30% and Mitsui will own 70% which it will purchase for \$472.5 million. On June 22nd, 2023, the agreement for the JV was signed under the name Nutrinova. The deal is expected to close in H2, and Celanese will use the cash proceeds to deleverage.

Celanese reported second quarter fiscal 2023 results on August 7th, 2023. Net sales for the quarter was \$2.8 billion, a 12% increase over the prior year. Celanese generated adjusted earnings per share in the second quarter of \$2.17 compared to \$4.99 in Q2 2022.

Leadership provided third quarter 2023 guidance and expects adjusted EPS for the quarter to come in around \$2.25. For the full year, it expects adjusted EPS of \$9.00 to \$10.00. Celanese also believes it will be able to reduce net debt by \$1 billion in 2023, with about \$450 million coming from the Food Ingredients JV.

Growth on a Per-Share Basis

Year	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2028
Adj. EPS	\$4.50	\$5.67	\$6.02	\$6.61	\$7.51	\$11.00	\$9.53	\$7.64	\$18.12	\$15.88	\$11.31	\$17.40
DPS	\$0.53	\$0.93	\$1.15	\$1.38	\$1.74	\$2.08	\$2.40	\$2.48	\$2.72	\$2.74	\$2.80	\$4.51
Shares²	156.9	152.9	146.8	140.7	135.8	128.1	119.6	114.2	114.2	114.2	110.0	95.0

Celanese's adjusted earnings per share history has trended mostly upwards in the last decade, hitting a peak in 2018 before coming back down due to the COVID pandemic, and then hitting its newest new peak in 2021 with a massive \$18.12 per share. While 2022 results came short of 2021, adjusted earnings were still excellent. Celanese has a record of compounding adjusted EPS at a rate of 15% and 16% over the past nine and five years. We estimate that Celanese can continue to grow adjusted EPS by roughly 9% in the intermediate term, and we expect the dividend will grow at 10% per year as it has been increased by double digits over the last nine years.

Celanese Corp (CE)

Updated August 15th, 2023 by Quinn Mohammed

The company is accelerating their capital deployment cycle and allocating to their highest return opportunities. While the company previously anticipated having \$6 billion of capital to allocate to high-return mergers and acquisitions and share repurchases at the end of Q4 2021, Celanese announced the \$11 billion acquisition of DuPont's mobility and materials business in Q1 2022. This acquisition will increase the scale and improve vertical integration for Celanese Corp. However, it will also lead to increased debt, but the company anticipates rapid deleveraging within two years of the transaction close. For example, it will utilize the cash proceeds from its upcoming Food Ingredients JV to deleverage.

Valuation Analysis

Year	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	Now	2028
Avg. P/E	11.0	10.3	10.6	10.3	12.7	9.7	11.5	13.3	8.6	7.9	10.5	9.0
Avg. Yld.	1.1%	1.6%	1.8%	2.0%	1.8%	2.0%	2.2%	2.4%	1.7%	2.1%	2.3%	2.9%

Celanese has traded at a narrow PE over the last nine and five years, at 10.6 and 10.2 on average over these periods. Today the company trades in-line with its average PE ratio, at 10.5 times adjusted EPS. Still, we believe the valuation will contract from here, despite their robust growth plan and solid earnings and dividend growth rate. We see CE as trading at 117% of fair value.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2028
Payout	12%	16%	19%	21%	23%	19%	25%	32%	15%	17%	25%	26%

Celanese's dividend appears to be quite safe given its estimated payout ratio of 25% in 2023 and its average payout ratio which has remained below 30% over the last decade. This dividend has grown for twelve consecutive years, and we expect this to continue. Celanese Corporation did not face great hardships during the great financial crisis as many other companies did; from 2007 onwards, earnings per share actually grew. At the time, the company paid a small dividend of \$0.16 annually from 2006 to 2009, which was only a small fraction of earnings and the payout ratio remained solid. The company believes its competitive advantages include its global assets and resources, marketplace presence, broad materials portfolio, and differentiated capabilities. Notably, Celanese's net debt rose to \$13.1 billion as of the end of second quarter 2023, compared to \$3.0 billion at the end of second quarter 2022.

Final Thoughts & Recommendation

Celanese completed a transformative acquisition valued at \$11 billion, which has seen the company's debt load increase, but should drive significant free cash flow expansion. Our estimated earnings growth will support strong dividend growth as the payout ratio still has space to expand. We believe Celanese is trading at 117% fair value, and we believe it can generate 8.0% in total annual returns based on 9.0% earnings growth and a 2.3% dividend yield, offset by a potential -3.1% valuation headwind. Celanese earns a hold rating.
