Overview & Current Events

Founded in 1971, Devon Energy Corporation (DVN) is an independent energy company engaged primarily in the exploration, development and production of oil, natural gas and NGLs. On January 7th, 2021, Devon and WPX Energy completed an all-stock merger of equals. The combined \$32.5 billion market cap company benefits from enhanced scale, improved margins, higher free cash flow, and the financial strength to accelerate the return of cash to shareholders through a “fixed plus variable” dividend strategy.

Devon reported Q2 2023 earnings on August 1st, 2023. For the quarter, earnings per share equalled \$1.07 compared to the \$2.93 per share reported in the same period last year. In line with its fixed-plus-variable dividend pay-out, Devon declared a \$0.49 quarterly dividend, a decrease over the previous quarter. The company repurchased \$200 million worth of shares during the quarter.

The company’s second-quarter performance has once again demonstrated the quality of its asset portfolio, the execution capabilities of the company and the financial benefits of its disciplined capital plan. One of the key accomplishments during the quarter has been the record-setting oil production, supported by strong well productivity in the Delaware Basin as well as efficiency gains that compressed project cycle times. The company has managed to generate free cash flow for 12 consecutive quarters and returned \$690 million of capital to shareholders through a combination of dividends and share buybacks.

Growth on a Per-Share Basis

Year	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2028
EPS	\$4.29	\$4.91	\$2.52	-\$0.13	\$1.59	\$1.28	\$1.41	-\$0.09	\$3.52	\$9.12	\$3.50	\$2.07
DPS	\$0.86	\$0.94	\$0.96	\$0.42	\$0.24	\$0.30	\$0.35	\$0.68	\$1.97	\$5.17	\$0.80	\$0.47
Shares¹	406	409	418	523	525	449	382	382	671	653	650.0	630.0

The cyclical nature inherent to commodity producers, and particularly oil and gas companies makes it difficult to accurately estimate a future growth rate over the next 5 years, particularly given that Devon Energy’s earnings will be heavily impacted by the price of oil 5 years from now, which is something we cannot predict.

That said, the currently elevated oil and gas prices are the result of temporary supply constraints stemming from supply chain disruptions, lack of investment in new production since the 2014 oil price crash, and geopolitical issues with Russia. While none of these issues have a clear end in sight now, it’s not unreasonable to assume that they will be worked out at some point over the next 5 years, and oil prices will subsequently drop.

For these reasons we expect that 2028 earnings and dividends will be significantly lower than 2022, at only around \$2.07 per share in earnings and \$0.47 in regular quarterly dividends.

¹ In millions.

Valuation Analysis

Year	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	Now	2028
Avg. P/E	13.5	13.7	21.0	--	23.8	28.9	18.7	--	8.5	6.0	14.3	15.0
Avg. Yld.	1.5%	1.4%	1.8%	1.2%	0.6%	0.8%	1.3%	3.2%	1.5%	9.5%	1.6%	1.5%

Devon has traded at a surprisingly elevated average P/E of around 17 times earnings over the last decade. Part of the reason for this is because much of that time was spent in an oil and gas bear market, which depressed earnings and subsequently raised P/E ratios. While this premium has since reversed given the massive earnings growth the business saw in the past 2 years, we believe the company will continue to trade in line with the market average of 15, as the top of the oil cycle could slowly unwind over the next 5 years.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2028
Payout	20%	19%	38%	-323%	15%	23%	25%	-756%	56%	57%	23%	23%

The focus that the management team has in strengthening the balance sheet and returning capital to investors, rather than re-invest into the business at what is most likely the top of an oil cycle means that Devon Energy is well prepared for any downturn in the foreseeable future and will likely survive another oil price crash.

It's important to be aware though that in the event of such a crash the fixed-plus-variable dividend structure will likely result in a dividend cut.

Final Thoughts & Recommendation

Cyclical oil companies like Devon are best purchased at the bottom of a cycle, and so despite seemingly good performance over the past few years, investors would do well to be skeptical of that outperformance continuing in the mid to long term. As such, we expect the next 5 years to give a total return of -7.5% annually. The bulk of that loss comes from our -10% earnings and dividend contraction estimate, coming from our expectation that oil prices will return to levels closer to their historical norms. The security earns a sell rating.
