## Overview \& Current Events

Oxford Square Capital Corp. is a BDC (Business Development Company) specializing in financing early and middle-stage businesses through loans and CLOs. The company holds an equally split portfolio of First-Lien, Second-Lien, and CLO equity assets spread across 7 industries, with the highest exposure in structured finance and software at $28.8 \%$ and $25.8 \%$, respectively. The company's assets have a gross investment value of $\$ 306.1$ million in 61 positions, with $69 \%$ of debt securities being secured. OXSQ generates around $\$ 43$ million in annual interest payments and is based in Greenwich, Connecticut.
On August $10^{\text {th }}, 2023$, Oxford Square reported its Q2 results for the period ending June $30^{\text {th }}, 2023$. For the period, the company generated approximately $\$ 13.5$ million of total investment income, up $4.7 \%$ from the previous quarter.

The rise in total investment income was due to rising interest rates. Specifically, the weighted average yield of the debt investments came in at $12.8 \%$ at current cost, compared to $12.4 \%$ during Q1-2023. This increase was further bundled with a higher cash distribution yield from OXSQ's CLO equity investments, which grew from $15.3 \%$ to $18.4 \%$ sequentially. Total expenses, which primarily include interest paid on its own financing and managers' fees, amounted to $\$ 6.8$ million, $\$ 0.4$ million lower than Q1-2023. As a result of a higher total investment income being only partially offset by higher expenses, NII (the net investment income) amounted to $\$ 6.7$ million, up $\$ 0.2$ sequentially. On a per share basis, NII came in at $\$ 0.12$. Net asset value (NAV) per share was $\$ 2.88$ compared to $\$ 2.80$ last quarter. This was due to a net investment income exceeding the distributions paid during this period. Based on the company's current portfolio composition, we now forecast a FY2023 IIS of $\$ 0.50$.

The company's investment income per share has been declining at a 10 -year CAGR of $9.9 \%$, as Oxford Square has been failing when it comes to refinancing its investment at attractive yields, resulting in declining investment spreads. Additionally, the company has been historically over-distributing dividends to shareholders, decaying its NAV, and hence its future income generation due to fewer assets.
Rising interest rates should help boost the company's results in the medium-term, as was the case in its Q2 results. However, with the company's investments declining in value and a generally falling NAV creating a downward spiral on reinvested capital, income generation could further decline. Hence, we expect a $-3 \% \mathrm{IIS} /$ share decline in the mediumterm. As has been the case in the past several times, we expect further dividend cuts over the medium-term due to their

As per the company's goal and obligation (as a Business Development Company) to distribute the majority of its net income to shareholders, the stock's yield has hovered around the mid-teens, averaging nearly $14 \%$ over the past decade. Despite management's latest distribution slash to a monthly $\$ 0.035$ payout, the stock has declined enough to push the current yield to $13.4 \%$. We believe a valuation multiple of 7.5 X adequately reflects the stock's risk/reward investment case. OXSQ is better valued through its book value, which currently stands at $\$ 2.88$, lower than the stock's price of $\$ 3.13$. This is likely because investors expect a rebound in NAV following higher NII. It could be the case in the short term, but believe the long-term trend of NAV deterioration will last. We remind that NAV/share stood at $\$ 5.03, \$ 4.92$, \$4.65, \$3.67, \$3.34, and \$2.78 in Q3-2021, Q4-2021, Q1-2022, Q2-2022, Q3-2022, and Q4-2022 respectively.

Safety, Quality, Competitive Advantage, \& Recession Resiliency

OXSQ's payout ratio has often been above $100 \%$ over the years, as management has historically paid investors more than what the company earned. While the stock's distribution yield has been seemingly attractive over the years, the company has been wiping an equal, and sometimes higher, amount from its NAV. Such a strategy could be sustained only via a gradually increased interest income. However, with total investment income declining over time amid a shrinking investment portfolio, we can hardly see any reversal from the current predicament. The ongoing shareholder value deterioration trend does not seem to be nearing an end-, at least not anytime soon. Overall, we believe that the company's future investment income generation carries substantial risks, while a potential recession and an adverse economic environment could severely damage its interest income.

## Final Thoughts \& Recommendation

Oxford Square Capital Corp. may benefit from rising yields in the short-term, but it is likely to continue deteriorating shareholders' equity value over the medium-term. Therefore, another distribution reduction should not surprise investors. Regardless, we forecast an annualized total return potential of $10.7 \%$ in the medium term. This is because our weakening earnings and distribution projections could be more than offset by the current yield and possibility of modest valuation tailwinds. We have thus upgraded our rating to a buy. Still, we highlight that income investors should not rely on Oxford Square's distributions.
