Overview & Current Events

Toyota Motor Corporation is a multinational automotive conglomerate and Japan's largest manufacturer of automobiles. The company was founded in 1933 and has grown to be a leader in the automotive industry, manufacturing well-known vehicles such as the Camry, Corolla, Highlander, Sienna, Yaris, Prius, and RAV4. United States investors can invest in Toyota through American Depositary Receipts (ADRs) listed on the New York Stock Exchange. Toyota is headquartered in Toyota, Japan. All numbers in this report are in US\$ unless noted otherwise.

Toyota Motor Corporation reported its fiscal 2024 first quarter earnings results in August. The company generated revenues of 10.5 trillion Yen during the quarter, which equates to revenues of \$72 billion. This was 24% more than the revenues that Toyota was able to generate during the previous year's quarter when denominated in Yen. Toyota generated operating profits of 1.12 trillion Yen, which was up by more than 90% versus the previous year's period, which mostly was the result of lower input costs that allowed Toyota to grow its margins.

Toyota's net profits grew a lot as well versus the previous year's period, and earnings-per-share totaled \$3.30 during the quarter, up almost 80% year over year in Yen. Since the Yen has weakened versus the USD, the performance was weaker when looking at results from a USD perspective. For this year, fiscal 2024, Toyota is forecasted to see an earnings increase, as operating profits are expected to come in above the prior year's level, while earnings-per-share are expected at \$19.00, which would be up nicely versus the earnings-per-share that Toyota has generated during 2023.

Growth on a Per-Share Basis

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2029
EPS	\$11.8	\$12.3	\$12.4	\$10.7	\$13.9	\$15.3	\$16.8	\$17.25	\$15.90	\$12.80	\$19.00	\$19.97
DPS	\$3.23	\$3.28	\$3.79	\$3.77	\$3.95	\$4.04	\$4.02	\$4.40	\$4.55	\$4.26	\$4.26	\$4.26
Shares³	1580	1570	1520	1490	1450	1425	1425	1400	1390	1380	1380	1350

Toyota Motor Corporation's earnings-per-share history is not very smooth, due to its poor performance during the financial crisis. The global economic downturn between 2007 and 2009 hurt all automobile manufacturers, even causing the bankruptcy of General Motors. Since fiscal 2014, when Toyota's earnings stabilized, the company has grown its earnings-per-share at 4% per year. Currency rates can impact Toyota's results when its results are converted to US\$, as Toyota generates a large amount of its earnings in Japan and other overseas markets.

While Toyota was an early mover in the hybrid vehicle market thanks to the introduction of the Toyota Prius in 1997, the company has yet to introduce a range of fully electric vehicle, outside of the all-electric Prius, that has gained widespread consumer popularity. We believe Toyota's reputation gives it the capability to capture meaningful market share once it introduces a range of fully electric vehicles. Toyota's strong operating efficiency, which is centered around a focus on lean operations and fast throughput, allows for above-average margins relative to most of the company's peers. This, coupled with new cost-saving initiatives that aim to reduce the automobile company's fixed costs, will be

another positive for Toyota's earnings growth. Toyota saw its sales decline during the pandemic, but profitability remained healthy. With inflationary pressures coming down, this year's profits should grow meaningfully.

Valuation Analysis

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	Now	2029
Avg. P/E	10.3	9.8	10.0	10.5	8.6	7.9	6.8	9.0	11.4	11.1	8.7	10.0
Avg. Yld.	2.7%	2.7%	2.9%	3.4%	3.5%	3.7%	3.5%	2.6%	2.5%	3.0%	2.6%	2.1%

Toyota has been valued at 8 to 12 times earnings since 2013, when its profits hit pre-crisis levels again. Right now, shares trade for ~9 times this year's earnings-per-share estimate. This represents a relatively moderate valuation compared to how Toyota's shares were valued in the past. Due to the issues in the industry, such as the need for heavy electrification investments and supply chain issues, we believe that future fair value is at around 10 times annual net profits. We thus see some minor upside potential for Toyota's shares from the current level.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2029
Payout	27.4%	26.6%	29.4%	35.1%	29.9%	28.8%	23.9%	23.3%	28.6%	33.3%	22.4%	21.3%

Toyota's dividend payout ratio declined substantially following the last financial crisis, when earnings started to rise again. We believe that dividends will remain flat for the foreseeable future, but there are no guarantees for that.

Toyota was hit hard during the last financial crisis, like all of its peers. During other global downturns, such as the current pandemic crisis, the company will suffer from substantial sales declines as well. Toyota's major scale, and its operating efficiency provide competitive advantages over its peers. Its leadership role regarding hybrid vehicles has resulted in a positive reputation, on which Toyota could capitalize with electric vehicles in the future.

Final Thoughts & Recommendation

Toyota is, by vehicle sales, profits, and market capitalization, a leading automobile producer. While the company battled some cost headwinds last year, this year should be better again. Toyota is famous for its operating efficiency, but due to massive industry changes, the future is still somewhat uncertain. Based on current estimates, Toyota trades below its fair value right now. Due to solid expected returns, we rate Toyota a hold right here.
