Overview & Current Events

Permianville Royalty Trust (PVL) was incorporated in 2011 and is based in Houston, Texas. It operates as a statutory trust and owns a net profits interest representing the right to receive 80% of the net profits from the sale of oil and natural gas production from properties located in the states of Texas, Louisiana and New Mexico. The company was formerly known as Enduro Royalty Trust and changed its name to Permianville Royalty Trust in September 2018. It has a market capitalization of \$71 million. The trust's assets are static in that no further properties can be added. In addition, the trust is passive, as it has no control over operating costs and the rate of production.

Due to its pure upstream nature, PVL is highly sensitive to the cycles of oil and gas prices. Due to the collapse in these prices caused by the pandemic, PVL suspended its distribution for 13 consecutive months, from mid-2020 to mid-2021.

In mid-November, PVL reported (11/14/23) financial results for the third quarter of fiscal 2023. Oil volumes and gas volumes grew 24% and 3%, respectively, over the prior year's quarter thanks to timing of cash receipts. However, the average realized prices of oil and gas decreased -25% and -49%, respectively, off above average levels in last year's quarter amid the early phases of sanctions of Europe and the U.S. on Russia for its invasion in Ukraine. As a result, distributable income decreased -18%. PVL has offered distributions of \$0.23 per unit so far this year, which correspond to a 13.0% annualized yield. Moreover, oil prices are lower than they were last year but they remain above average thanks to several production cuts implemented by OPEC and Russia.

Growth on a Per-Unit Basis

Year	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2028
DCFU	\$1.46	\$0.80	\$0.38	\$0.24	\$0.21	\$0.42	\$0.31	\$0.13	\$0.12	\$0.44	\$0.28	\$0.25
DPU	\$1.46	\$0.80	\$0.38	\$0.24	\$0.21	\$0.42	\$0.31	\$0.13	\$0.12	\$0.44	\$0.28	\$0.25
Units²	33.0	33.0	33.0	33.0	33.0	33.0	33.0	33.0	33.0	33.0	33.0	33.0

PVL has generated an average distributable and distributed cash flow of \$0.45/unit per year for the past decade, though with a noticeable decrease in the last eight years. Given the natural decline of the production of oil wells and gas wells, the long-term downtrend in cash flows should be expected. Over the last nine years, the total production of PVL has declined at an average annual rate of -1.5%. On the other hand, the trust posted 8-year high distributable cash flow per unit last year thanks to multi-year high oil and gas prices, which resulted from the sanctions of western countries on Russia. Given the high comparison base formed this year and the natural decline of producing wells, we expect distributable cash flow per unit to decline by -2% per year on average over the next five years.

Valuation Analysis

Year	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	Now	2028

Permianville Royalty Trust (PVL)

Updated November 16th, 2023 by Aristofanis Papadatos

The trust's DCFU price multiple has averaged 9.4 over the past 10 years. We consider this a fair valuation multiple due to our natural expectations for declining production volumes in the long run. PVL is currently trading at a valuation multiple of 7.7. If it trades at our assumed fair valuation level in five years, it will enjoy a 4.1% annualized gain in its returns.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2028
Payout	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%

As PVL was formed only in 2011, it has a short history but it has offered an average 11.2% distribution yield over the last decade (albeit with high volatility in the distributions). However, future distributions are highly unpredictable due to the absence of any guidance and the unknown path of oil and gas prices. If the realized oil prices of PBT remain high and gas prices increase, the trust will reward its unit holders with generous distributions. On the other hand, whenever the energy market enters another downcycle, the trust is likely to exhibit poor performance. The suspension of the distribution for 13 months in 2020-2021 and the 67% plunge of the stock in the first month of the pandemic are stern reminders of the risk and high sensitivity of PVL to recessions and downturns of the energy market.

Final Thoughts & Recommendation

PVL is thriving right now thanks to the sanctions of western countries on Russia and the deep production cuts of OPEC, which have enabled the U.S. to grow its production to pre-pandemic levels. However, gas prices have slumped this year and we expect oil prices to deflate in the upcoming years due to the record number of renewable energy projects that are in their development phase. We expect PVL to offer an 11.5% average annual return over the next five years thanks to its 13.0% initial distribution and a 4.1% valuation tailwind, which may be partly offset by a -2.0% decline of distributable income per unit. As a result, the stock receives a hold rating. PVL is not a buy-and-hold-forever stock due to the natural decline of its production in the long run. On the other hand, it is much more attractively valued than most of the other oil and gas trusts right now.
