Overview & Current Events

Chevron is the fourth-largest oil major in the world based on its market cap of \$287 billion, behind only Saudi Aramco, Shell (SHEL) and ExxonMobil (XOM). In 2019, 2021, 2022 and 2023, Chevron generated 78%, 84%, 79% and 74% of its earnings from its upstream segment, respectively. While close industry peers BP and Total produce crude oil and natural gas at approximately equal ratios, Chevron is more leveraged to the oil price, with a 59/41 production ratio. Moreover, as Chevron prices some natural gas volumes based on the oil price, nearly 75% of its output is priced based on the oil price. As a result, Chevron is more leveraged to the oil price than the other oil majors.

On October 23rd, 2023, Chevron agreed to Acquire Hess (HES) for \$53 billion in an all-stock deal. Thanks to this deal, Chevron will purchase the highly profitable Stabroek block in Guyana and Bakken assets and thus it will greatly enhance its production and its free cash flow. As Chevron is fully valued, we view the all-stock deal as attractive for Chevron.

In early February, Chevron reported (2/2/24) financial results for the fourth quarter of fiscal 2023. Thanks to a slight improvement in the price of oil triggered by production cuts by OPEC and Russia and 7% production growth thanks to the acquisition of PDC Energy, earnings-per-share grew 13% sequentially, from \$3.05 to \$3.45, and exceeded the analysts' consensus by \$0.23. We expect lower oil prices this year but Chevron will post strong production growth thanks to its recent acquisition of PDC Energy and its pending acquisition of Hess. The company just raised its dividend by 8%. We expect above-average earnings this year but we still expect oil prices to deflate in the upcoming years.

Growth on a Per-Share Basis

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2029
EPS	\$10.14	\$2.45	-\$0.27	\$3.79	\$7.74	\$6.19	-\$0.20	\$8.13	\$18.83	\$13.13	\$12.50	\$8.24
DPS	\$4.21	\$4.28	\$4.29	\$4.32	\$4.48	\$4.76	\$5.16	\$5.31	\$5.68	\$6.04	\$6.52	\$6.80
Shares¹	1880	1883	1892	1905	1914	1872	1911	1922	1920	1868	2000	1900

Chevron invested heavily in growth projects for years but failed to grow its output for an entire decade, as oil projects take several years to start bearing fruit. However, Chevron is now in the positive phase of its investing cycle.

Chevron grew its output by 5% in 2017, 7% in 2018, 4% in 2019, 1% in 2020 due to the pandemic and 0.5% in 2021. Its output dipped -3% in 2022 but it grew 4% last year thanks to sustained growth in the Permian Basin and the acquisition of PDC Energy. The company has more than doubled the value of its assets in the Permian in the last five years thanks to new discoveries and technological advances. Chevron also learned its lesson from the previous downturn and now invests most of its funds in projects that begin delivering cash flows within two years. In addition, thanks to the high grading of its asset portfolio, Chevron can fund its dividend even at an oil price of \$40. The pending acquisition of Hess is likely to be a major growth driver in terms of output and earnings in the years ahead. Nevertheless, given the nearly all-time high earnings-per-share expected this year, we expect an -8% average annual decrease of earnings-per-share over the next five years. Investors should not forget the dramatic cyclicity of the oil industry.

¹ In millions.

Valuation Analysis

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	Now	2029
Avg. P/E	11.9	39.4	---	29.4	14.1	19.3	---	12.8	8.4	12.2	12.2	14.0
Avg. Yld.	3.5%	4.4%	4.3%	3.9%	4.0%	4.0%	5.8%	5.1%	3.6%	3.8%	4.3%	5.9%

Chevron's stock valuation has fluctuated wildly over the past decade. This reflects the underlying volatility of its business model and profitability. When oil prices rise and Chevron's profits increase, its valuation multiple shrinks. Conversely, periods of falling oil prices result in a ballooning price-to-earnings ratio. Chevron is now trading at a price-to-earnings ratio of 12.2. This earnings multiple is lower than the 10-year average of 18.4 of the stock. We expect the stock to trade at an earnings multiple around 14.0 in 2029. If this proves correct, the stock will enjoy a 2.9% annualized gain in its returns over the next five years.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2029
Payout	41.5%	175%	---	114%	57.9%	76.9%	---	65.3%	30.2%	46.0%	52.2%	82.6%

As a commodity producer, Chevron is vulnerable to any downturn in the price of oil, particularly given that it is the most leveraged oil major to the oil price. The oil major issued debt in 2020 to defend its dividend amid the pandemic but it has recovered strongly from that crisis and the payout ratio has become sustainable again.

Chevron's main competitive advantage is its size and industry position. The company achieved record free cash flows in 2021-2023. Chevron just raised its dividend by 8% and is likely to keep raising its dividend in the upcoming years, albeit at a modest pace. Chevron is a member of the exclusive Dividend Aristocrats list thanks to its 37 consecutive years of dividend increases. The only other Dividend Aristocrat in the oil industry is Exxon Mobil.

Final Thoughts & Recommendation

Chevron is one of the highest quality energy stocks. Thanks to the exceptionally high price of oil, which has resulted from the war in Ukraine and the deep production cuts of OPEC, Chevron is poised for another strong year. However, due to the high cyclicality of the energy sector, we expect the price of oil to deflate in the upcoming years. We expect the stock to offer a -0.4% average annual return over the next five years, as its 4.3% dividend and its 2.9% annualized valuation tailwind may be offset by an -8.0% annual decline of earnings-per-share. We maintain our sell rating.
