Overview & Current Events

Permianville Royalty Trust (PVL) was incorporated in 2011 and is based in Houston, Texas. It operates as a statutory trust and owns a net profits interest representing the right to receive 80% of the net profits from the sale of oil and natural gas production from properties located in the states of Texas, Louisiana and New Mexico. The company was formerly known as Enduro Royalty Trust and changed its name to Permianville Royalty Trust in September 2018. It has a market capitalization of \$45 million. The trust's assets are static in that no further properties can be added. In addition, the trust is passive, as it has no control over operating costs and the rate of production.

Due to its pure upstream nature, PVL is highly sensitive to the cycles of oil and gas prices. Due to the collapse in these prices caused by the pandemic, PVL suspended its distribution for 13 consecutive months, from mid-2020 to mid-2021. In late March, PVL reported (3/22/24) financial results for the full fiscal 2023. Oil volumes and gas volumes decreased -11% and -17%, respectively, over the prior year due to timing of cash receipts. Moreover, the average realized prices of oil and gas decreased -18% and -60%, respectively, off above average levels in 2022 amid the early phases of sanctions of Europe and the U.S. on Russia for its invasion in Ukraine. As a result, distributable income decreased -16%. More importantly, PVL has suspended its distributions this year, as its operating expenses have exceeded its operating income, partly due to depressed gas prices. We expect the trust to resume distributions later this year but that will depend on oil and gas prices. Investors should always keep in mind the high risk and volatility of PVL.

Growth on a Per-Unit Basis

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2029
DCFU	\$0.80	\$0.38	\$0.24	\$0.21	\$0.42	\$0.31	\$0.13	\$0.12	\$0.44	\$0.37	\$0.10	\$0.20
DPU	\$0.80	\$0.38	\$0.24	\$0.21	\$0.42	\$0.31	\$0.13	\$0.12	\$0.44	\$0.37	\$0.10	\$0.20
Units²	33.0	33.0	33.0	33.0	33.0	33.0	33.0	33.0	33.0	33.0	33.0	33.0

PVL has generated an average distributable and distributed cash flow of \$0.34/unit per year for the past decade, though with a noticeable decrease in the last nine years. Given the natural decline of the production of oil wells and gas wells, the long-term downtrend in cash flows should be expected. Over the last decade, the total output of PVL has declined at an average annual rate of -2%. Moreover, the proved reserves of PVL have declined -37% in total in the last two years. The trust posted high distributable cash flow per unit in 2022-2023 thanks to multi-year high oil and gas prices, which resulted from the sanctions of western countries on Russia but it is now suffering from depressed gas prices. Given the low comparison base formed this year, we expect 15% growth of distributable cash flow per unit until 2029.

Valuation Analysis

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	Now	2029
P/DCFU	10.4	7.2	9.9	12.5	7.8	8.3	8.9	14.6	7.4	6.4	13.5	9.3
Avg. Yld.	9.6%	13.8%	10.1%	8.0%	12.8%	12.1%	11.2%	6.9%	13.5%	15.7%	7.4%	10.8%

Permianville Royalty Trust (PVL)

Updated March 28th, 2024 by Aristofanis Papadatos

The trust's DCFU price multiple has averaged 9.3 over the past 10 years. We consider this a fair valuation multiple due to our natural expectations for declining production volumes in the long run. PVL is currently trading at a valuation multiple of 13.5. If it trades at our assumed fair valuation level in five years, it will incur a -7.2% annualized drag in its returns.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2029
Payout	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%

As PVL was formed only in 2011, it has a short history but it has offered an average 11.4% distribution yield over the last decade (albeit with high volatility in the distributions). However, future distributions are highly unpredictable due to the absence of any guidance and the unknown path of oil and gas prices. The trust has suspended its distributions this year, primarily due to depressed gas prices. In addition, whenever the energy market enters another downcycle, the trust is likely to exhibit poor performance. The suspension of the distribution for 13 months in 2020-2021 and this year and the 67% plunge of the stock in the first month of the pandemic are stern reminders of the risk and high sensitivity of PVL to recessions and downturns of the energy market.

Final Thoughts & Recommendation

PVL has suspended its distributions this year due to depressed gas prices and high operating costs. The trust may resume its distributions later this year but we expect oil prices to deflate in the upcoming years due to the record number of renewable energy projects that are in their development phase. If PVL resumes its distributions, it could offer a 14.4% average annual return over the next five years thanks to 15% growth of distributions per unit and a potential 7.4% forward distribution, partly offset by a -7.2% valuation headwind. The stock receives a hold rating. PVL is not a buy-and-hold-forever stock due to the natural decline of its production in the long run and its high risk.
