Overview & Current Events

PermRock Royalty Trust (PRT) is a trust formed in November 2017 by Boaz Energy, a company that is focused on the acquisition, development and operation of oil and natural gas properties in the Permian Basin. The trust derives all its cash flows from profits from the sale of oil and natural gas production from these properties and distributes dividends monthly. PermRock trades with a market capitalization of \$51 million. The stock went public in May 2018.

The Permian Basin is the most prolific oil producing area in the U.S. The properties of PermRock consist of long-life reserves in mature, conventional oil fields, with shallow, predictable decline rates. The trust can pump additional oil via water-flooding techniques, while it can also identify new reserves in the area in the upcoming years.

On April 1st, 2024, PermRock Royalty reported FY 2023 results for the period ending December 31st, 2023. Net profits income received by the trust was \$7.13 million, compared to \$13.2 million in 2022. The average realized sale price of oil declined 18% year-over-year, while natural gas plummeted by 53%. Distributable income for the trust came to \$6.26 million, down from \$12.30 million in the prior year period and distributable income per unit of \$0.51 was down from \$1.01 in the prior year.

Total cash reserves as of December 31st, 2023 were \$1 million, identical to December 31st, 2022. For fiscal 2024, the trust has so far declared \$0.0923 in distributions.

Growth on a Per-Share Basis

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2029
DIPU	---	---	---	---	---	\$1.28	\$0.73	\$0.16	\$0.61	\$1.01	\$0.37	\$0.47
DPU	---	---	---	---	---	\$1.28	\$0.73	\$0.16	\$0.61	\$1.01	\$0.37	\$0.47
Units¹	---	---	---	---	---	12	12	12	12	12	12.2	12.2

PermRock previously guided for production growth, however, oil and natural gas production volumes have declined every year since 2019. Still, the average realized sales price was higher for both oil and natural gas in 2021 and 2022, but declined in 2023. In 2024, Boaz Energy is expecting to drill new producing wells in the Permian Shelf.

Given the mature nature of the trust's assets, future production and reserve estimates are somewhat predictable. Moreover, management believes that it can grow production rates via expanded water-flooding operations and drilling of additional wells. Nevertheless, the results of the trust are extremely sensitive to the price of oil and hence it is impossible to predict future earnings with any degree of accuracy. The oil glut in 2020 due to the coronavirus ravaged commodity prices but prices soared in 2022 due to the ongoing war in Ukraine. As with other O&G royalty trusts, this one is highly dependent on commodity prices. Significant increases in oil and natural gas sales prices led to blowout results in 2022, which we believe will be a cyclical peak in the company's results. The average realized sale price of oil (\$/Bbl) was \$76.24 during 2023, an 18% decrease compared to the price of \$93.15 in the prior year. We estimate 5% annual growth in distributable income per unit into 2029.

Valuation Analysis

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	Now	2029
Avg. P/DI	---	---	---	---	---	4.6	6.8	10.3	10.8	8.3	11.5	8.0
Avg. Yld.	---	---	---	---	---	9.5%	13.0%	4.9%	5.4%	9.6%	8.7%	12.5%

PermRock is currently trading at a P/DI ratio of 11.5 based on our estimated DIPU for 2023. As the trust has a short history and it is highly exposed to the price of oil, we prefer to be conservative and assume a fair earnings multiple of 8.0. PermRock is trading well above our assumed fair valuation, thus we expect a -7.0% headwind to total annual returns from a contracting valuation.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2029
Payout	---	---	---	---	---	100%	100%	100%	100%	100%	100%	100%

The properties of PermRock are in the Permian Basin, the most prolific oil producing area in the U.S. However, a trust may be a poor way to gain exposure to the booming production in the area. A real oil & gas company, either in corporate or MLP form, even if it is not active in this particular oil field, may produce better overall returns in the long term. The large increases in crude oil prices have led to great revenue benefits for the trust and its operations. Suspending the dividend for a few months in 2020 was a cautious move, and with the current outlook, it may not surpass its prior dividend level in the intermediate term.

Final Thoughts & Recommendation

PermRock Royalty Trust operates in a highly cyclical industry, which renders its results and distributions very volatile from year to year. We estimate annualized total returns of 6.8% over the next half decade stemming from the 8.7% yield and 5.0% distributable income per share growth, offset by the potential for a valuation headwind. Today we rate PRT a hold given its high yield, though it is fully dependent upon distributable income, which is highly volatile.
