Overview & Current Events

Genesis Energy is a diversified midstream energy limited partnership, which generates 51% of its operating income from offshore pipeline transportation, 31% from sodium minerals and sulfur services, 3% from onshore facilities and 15% from marine transportation. It has a market capitalization of \$1.6 billion.

Genesis Energy has dramatically underperformed the market in the last five years, as shares have fallen -41% whereas the S&P has rallied 85%. The underperformance of Genesis Energy reflects its poor business performance. The MLP has spent hefty amounts on capital expenses but the performance of its investments has been poor. As a result, it has posted negative free cash flows in six out of the last ten years. Moreover, it has markedly increased its debt load, with its interest expense currently consuming 72% of its operating income. Consequently, when some turnarounds and Hurricane Harvey adversely affected its results, the MLP was forced to cut its distribution by -31% in late 2017.

Even worse, Genesis Energy faced a fierce downturn in 2020-2021 due to the pandemic, which severely hurt the oil segment and the sodium business. The MLP cut its quarterly distribution by -73% in 2020, from \$0.55 to \$0.15.

In early May, Genesis Energy reported (5/2/24) financial results for the first quarter of fiscal 2024. The offshore pipeline exhibited flat performance vs. last year's quarter, as an increase in oil and gas volumes offset the effect of planned maintenance. The marine transportation segment enjoyed higher day rates but the soda and sulfur segment was negatively affected by lower export prices. As a result, distributable cash flow decreased from \$78 million to \$54 million and distribution coverage ratio decreased from 4.2 to 2.9. The company maintained its lackluster guidance for the full year, expecting EBITDA of \$680-\$740 million. At the mid-point, this guidance implies a -6% decrease. On the bright side, the MLP expects lower capital expenses and higher cash flows beginning from 2025. The hefty loss in 2020, which was ~31% of the current market cap, is a reminder of the excessive risk of Genesis Energy during downturns.

Growth on a Per-Share Basis

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2029
DCF/U	\$2.07	\$2.18	\$2.81	\$2.52	-\$4.22	\$2.93	\$2.08	\$1.66	\$2.88	\$2.87	\$2.85	\$3.15
DPU	\$2.29	\$2.47	\$2.72	\$2.65	\$2.10	\$2.20	\$1.00	\$0.60	\$0.60	\$0.60	\$0.60	\$0.60
Shares²	90.1	103.0	113.4	121.5	122.6	122.6	122.6	122.6	122.6	122.5	122.4	150.0

Genesis Energy has failed to grow its DCF per unit consistently over the last decade, mostly due to its poor investments and the impact of the pandemic on its business. The MLP has net debt of \$4.6 billion, which is nearly triple the current market cap, and a somewhat high leverage ratio (net debt/EBITDA) of 4.2. Due to its high leverage, the MLP was forced to sell a 36% stake in its CHOPS oil pipeline system in 2021 and used the proceeds to pay debt and become compliant with the requirements of its lenders. Given the outlook for lower capital expenses from 2025, we expect 2.0% growth of DCF per unit on average until 2029. Part of this growth should come from the deleveraging process, which will reduce interest expense to healthier levels. The choppy and poor growth record raises a red flag for the stock.

Valuation Analysis

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	Now	2029
P/DCF	20.5	16.9	12.9	8.9	---	7.3	3.8	5.7	3.7	3.7	4.6	4.9
Avg. Yld.	4.4%	5.7%	8.1%	8.8%	9.4%	9.4%	12.5%	6.3%	5.6%	5.6%	4.6%	3.9%

Genesis Energy is currently trading at a P/DCF ratio of 4.6, which is lower than its historical 5-year average of 4.9. If the stock trades at its average valuation level in five years, it will enjoy a 1.4% annualized gain in its returns.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2029
Payout	78.7%	37.6%	66.2%	65.0%	38.2%	75.1%	48.0%	36.1%	20.8%	20.9%	21.1%	19.1%

Given the volatile and lackluster performance record of Genesis Energy, it is evident that there is no meaningful competitive advantage in place. While Genesis Energy operates primarily with a fee-based model, its earnings are not resilient. In our view, the MLP invested too heavily and increased its leverage too much in the past. As a result, the financial burden of its debt exerts a strong drag on its results through high interest expense and dilution of its unit holders. It also renders Genesis Energy highly vulnerable to any downturn in its business, such as a recession.

Final Thoughts & Recommendation

Due to its poor business performance and its high leverage, which has caused two distribution cuts, Genesis Energy has dramatically underperformed the market in the last five years. However, the stock can offer a 7.2% average annual return over the next five years thanks to its 4.6% distribution, 2.0% growth and a 1.4% valuation tailwind. Nevertheless, it will be highly vulnerable in the event of another downturn, such as a recession. We rate the stock as a hold only for those who realize its risk and can stomach high stock price volatility.
