## Overview & Current Events

Permian Basin Royalty Trust (PBT), based in Dallas, Texas, is an oil and gas trust, which was founded in 1980. In 2023, about 55% of output was oil and 45% was gas, but 85% of revenues came from oil. PBT is a combination trust: unit holders have a 75% net overriding royalty interest in Waddell Ranch Properties in Texas, which includes several oil and gas wells; and a 95% net overriding royalty interest in the Texas Royalty Properties, which includes various oil wells.

The trust's assets are static in that no further properties can be added. The trust has no operations but is merely a pass-through vehicle for the royalties. PBT had royalty income of \$54.4 million in 2022 and \$29.0 million in 2023.

In early May, PBT reported (5/9/24) financial results for the first quarter of fiscal 2024. Its average realized prices of oil and gas decreased -6% and -36%, respectively, off high levels in the prior year's period. However, oil and gas volumes grew 17% and 13%, respectively. As a result, distributable income per unit grew 20%, from \$0.10 to \$0.12.

After some months of disappointing distributions, which resulted from high operating expenses on the Waddell Ranch properties, PBT boosted its distributions in the last two months of 2023. However, it has reduced them again this year due to high operating expenses on the Waddell Ranch properties and low gas prices amid unfavorable weather. In the first five months of this year, PBT has offered total distributions of \$0.23 per unit, which correspond to a 4.2% annualized yield. We are concerned over the unreliable and volatile business performance of PBT.

## Growth on a Per-Unit Basis

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2029
<b>DCFU</b>	\$1.02	\$0.34	\$0.42	\$0.63	\$0.66	\$0.42	\$0.24	\$0.23	\$1.15	\$0.60	<b>\$0.55</b>	<b>\$0.52</b>
<b>DPU</b>	\$1.02	\$0.34	\$0.42	\$0.63	\$0.66	\$0.42	\$0.24	\$0.23	\$1.15	\$0.60	<b>\$0.55</b>	<b>\$0.52</b>
<b>Units<sup>1</sup></b>	46.6	46.6	46.6	46.6	46.6	46.6	46.6	46.6	46.6	46.6	<b>46.6</b>	<b>46.6</b>

Essentially all the royalty income the trust receives is passed through to unit holders. The trust has generated an average distributable and distributed cash flow of \$0.57/unit annually for the past 10 years, though with a noticeable decrease in 2015-2021. Given the natural decline of the production of oil wells and gas wells, the long-term downtrend in cash flows should be expected. The trust posted 10-year high distributable cash flow in 2022 thanks to the sanctions of western countries on Russia but gas prices have plunged this year due to abnormally warm winter weather, which has resulted in high inventories. We also expect oil prices to deflate in the upcoming years due to a record number of clean energy projects underway. As a result, we expect distributable cash flow to decline by -1% per year on average over the next five years.

## Valuation Analysis

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	Now	2029
<b>P/DCFU</b>	12.8	22.9	15.8	14.4	13.2	13.6	13.3	23.9	14.5	37.1	<b>23.6</b>	<b>13.0</b>

# Permian Basin Royalty Trust (PBT)

Updated May 22<sup>nd</sup>, 2024 by Aristofanis Papadatos

The trust's DCFU price multiple has averaged 18.2 over the past 10 years. We assume a fair valuation multiple of 13.0 for the trust due to our natural expectations for declining production volumes in the long run. PBT is currently trading at a valuation multiple of 23.6. If PBT trades at our assumed fair valuation level in five years, it will incur an -11.3% annualized drag in its returns.

## Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2029
Payout	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%

PBT has been in continuous existence for 44 years paying an average 6.2% yield in the last decade (albeit with high volatility in the distributions). However, future distributions are highly unpredictable due to the absence of any guidance and the unknown path of oil and gas prices. If the realized price of oil of PBT remains elevated and the price of gas increases, the trust will reward its unit holders with generous distributions. On the other hand, whenever the energy market enters another downcycle, the trust is likely to exhibit poor performance.

## Final Thoughts & Recommendation

After many quarters of disappointing distributions, which resulted from high operating expenses, PBT boosted its distributions in the last two months of 2023 but it has reduced them again this year. Moreover, we expect oil prices to deflate in the upcoming years due to the record number of renewable energy projects that are in their development phase. PBT has slumped -46% in the last 12 months but it remains unattractive. We expect PBT to offer a -6.1% average annual return over the next five years, as its 4.2% initial distribution may be offset by a -1.0% annual decline of distributable income per unit and an -11.3% valuation headwind. As a result, PBT maintains its sell rating. We also reiterate that we do not believe PBT is a buy-and-hold-forever stock due to the natural decline of its production in the long run.
