Overview & Current Events

Valero, a \$43.0 billion market cap business, is the largest petroleum refiner in the U.S. It owns 15 refineries in the U.S., Canada and the U.K. and has a total capacity of about 3.2 million barrels/day. It also produces renewable diesel and has a midstream segment, Valero Energy Partners LP, but its contribution to total earnings is under 10%. Valero should be viewed as a nearly pure refiner.

U.S. refiners faced a severe downturn in 2020-2021 due to the pandemic, which caused a collapse in the consumption of oil products. Refining margins plunged and hence all the U.S. refiners incurred hefty losses in 2020. However, thanks to the vaccine rollout and weaker mutations of the virus, the pandemic has subsided and global oil demand has recovered.

In late October, Valero reported (10/24/24) results for the third quarter of 2024. The global market of refined products had become extremely tight due to the sanctions of western countries on Russia since early 2022 but that has come to an end. In the third quarter, refining margins collapsed off blowout levels in last year's quarter. Earnings-per-share decreased -85% over the prior year's quarter, from \$7.49 to \$1.14, though they exceeded the analysts' consensus by \$0.16. Valero has not missed the analysts' estimates for 25 consecutive quarters. The company stated that it still expects to begin producing sustainable aviation fuel (SAF) until the end of this year. Refining margins remained elevated for longer than expected thanks to strong demand for oil products, the permanent shutdown of some refineries around the globe since 2020 due to the pandemic and tight supply due to the Ukrainian crisis. However, they have returned to normal levels lately. As a result, we have lowered our forecast for this year from \$12.90 to \$9.50.

Growth on a Per-Share Basis

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2029
EPS	\$6.85	\$7.99	\$4.94	\$4.96	\$7.37	\$5.70	-\$3.12	\$2.81	\$29.16	\$24.90	\$9.50	\$8.50
DPS	\$1.05	\$1.70	\$2.40	\$2.80	\$3.20	\$3.60	\$3.92	\$3.92	\$3.92	\$4.08	\$4.28	\$4.28
Shares²	530	500	464	444	422	410	407	408	381	338	310	280

Valero was severely hurt by the pandemic in 2020-2021 and froze its dividend for 12 consecutive quarters, thus putting an end to its 10-year dividend growth streak. However, it has been thriving since 2022 thanks to the aforementioned tailwinds and thus it has raised its dividend by 5% this year. Moreover, it has a promising pipeline of growth projects for the next three years. These projects aim to lower carbon intensity and improve refining margins. Nevertheless, as refining margins are highly cyclical, we expect flat earnings-per-share in 2029 vs. mid-cycle earnings-per-share of \$8.50.

Valuation Analysis

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	Now	2029

Valero Energy Corporation (VLO)

Updated October 24th, 2024 by Aristofanis Papadatos

Valero is currently trading at 15.8 times its mid-cycle earnings-per-share of \$8.50. This earnings multiple is much higher than the 10-year average price-to-earnings ratio of 10.8 of the stock. If the stock trades at its average valuation level in five years, it will incur a -7.3% annualized drag due to the contraction of its price-to-earnings ratio.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2029
Payout	15.3%	21.3%	48.6%	56.5%	43.4%	63.2%	---	140%	13%	16.4%	50.4%	50.4%

Refining is a highly cyclical business and hence all the refiners are vulnerable to declining crack spreads. Crack spreads tightened significantly during the Great Recession, when the demand for oil products greatly deteriorated and gasoline became cheaper than crude oil for almost three months. As a result, Valero posted operating losses. A similar picture was evident in 2020-2021 due to the pandemic, as the prices of refined products fell more than the price of crude oil, thus exerting pressure on refining margins. On the bright side, Valero has a competitive advantage over its peers, namely the high complexity of its refineries, which enables the company to benefit from the gyrations of oil prices and refined products by optimizing its blend of feedstock and products.

Nevertheless, investors should note that U.S. refiners have now lost a significant past advantage. During the fierce downturn of the refining sector within 2011-2013, about 20% of refineries worldwide went out of business. The domestic refiners were not affected, as they were protected thanks to the ban on oil exports that prevailed back then. However, now that the ban has been lifted, they are more vulnerable and thus they all incurred material losses in 2020.

Final Thoughts & Recommendation

Valero has been thriving over the last two years thanks to strong demand for oil products and low global inventories of oil products due to the war in Ukraine and the permanent shutdown of some refineries due to the pandemic. However, refining margins have moderated lately. The stock has shed -14% since our last research report, in July, but remains unattractive in our view. It could offer a -3.3% average annual return over a 5-year period, as its 3.2% dividend may be offset by a -7.3% valuation headwind. We maintain our sell rating. Valero is likely to have material downside risk upon the next downturn of the refining industry.
