Overview & Current Events

Targa Resources is a leading provider of midstream services and one of the largest independent midstream energy companies in North America. The company is primarily engaged in the business of gathering, processing, transporting and selling natural gas and natural gas liquids (NGLs). It also gathers and stores crude oil and refined products. It has the largest gathering and processing position in the Permian Basin and a market capitalization of \$41.9 billion.

Targa was adversely affected by the downturn of the energy market in 2014-2016 and it took the company a whole decade to recover from that downturn. Its distributable cash flow (DCF) per share reached the level it was in 2015 this year. Moreover, its stock price plunged -90% from mid-2014 to early 2016 and it only recently retrieved its losses.

On July 29th, 2022, Targa acquired Lucid Energy for \$3.55 billion in cash. Lucid provides natural gas gathering, treating and processing services in the Delaware Basin, with more than 1,000 miles of natural gas pipelines. Targa has stated that the deal has already been accretive to its cash flows.

In early November, Targa reported (11/5/24) financial results for the third quarter of fiscal 2024. Adjusted EBITDA grew 27% over the prior year's quarter thanks to all-time high Permian, NGL transportation and fractionation volumes. The contribution from recently completed projects was significant. Management stated that it expects annual adjusted EBITDA near the top of its previous guidance of \$3.95-\$4.05 billion, thus implying approximate growth of 14%.

Accordingly, we have raised our forecast for annual cash flow per share from \$13.00 to \$13.50.

Due to the pandemic, Targa cut its quarterly dividend by -89% in 2020 but it has raised its dividend three times since then. Management raised the quarterly dividend from \$0.50 to \$0.75 this year and stated that it expects to keep raising the dividend for many more years. Targa has net debt of \$16.1 billion but it can service its debt thanks to the cash flows from recently completed projects.

Growth on a Per-Share Basis

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2029
CFPS	\$10.76	\$13.40	\$2.68	\$3.08	\$4.06	\$4.07	\$5.05	\$6.74	\$9.86	\$11.53	\$13.50	\$17.23
DPS	\$2.85	\$3.53	\$3.64	\$3.64	\$3.64	\$3.64	\$1.21	\$0.40	\$1.40	\$1.85	\$3.00	\$3.90
Shares¹	42.1	56.0	184.7	217.6	232.1	232.5	229.2	228.6	229.9	224.5	225.0	400.0

Midstream companies usually have more stable performance than upstream energy stocks. However, this has not been the case for Targa, which has a markedly volatile performance record throughout the last decade. On the bright side, Targa currently has decent growth prospects, as many growth projects have come online in the last four years and the company has a long pipeline of growth projects. These projects will contribute significant, mostly fee-based cash flows.

On the other hand, Targa has greatly diluted its unitholders in the last decade. It also has a material debt load, with its net debt standing at \$16.1 billion or about 4.5 times last year's EBITDA and its interest expense consumes 29% of its operating income. In 2019, Targa issued 10-year bonds at a 6.875% rate, which shows the desperation of Targa for funds. Overall, we expect cash flow per share to grow by 5% per year on average over the next five years.

Valuation Analysis

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	Now	2029
Avg. P/CF	10.8	5.7	14.7	16.1	12.1	9.7	4.1	6.2	7.0	6.8	14.4	7.0
Avg. Yld.	2.5%	4.6%	9.2%	7.3%	7.4%	9.2%	5.8%	1.0%	2.0%	2.3%	1.5%	3.2%

Targa has more than doubled this year thanks to the strong growth of its business and thus it is currently trading at a nearly 10-year high price-to-cash flow ratio of 14.4, which is much higher than its historical average of 9.5. Due to the high cyclicality of Targa, we assume a fair ratio of 7.0 for the stock. If Targa trades at our fair valuation level in five years, it will incur a -13.5% annualized drag due to the contraction of its cash flow multiple.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2029
Payout	26.5%	33.9%	136%	118%	89.7%	89.3%	24.0%	5.9%	14.2%	16.0%	22.2%	22.6%

Thanks to its industry position, Targa benefits from the integration of its assets and some economies of scale. While this is a competitive advantage, the volatile performance record reveals the vulnerability of the company to the gyrations of commodity prices, which are beyond its control. Targa is a risky security with a material debt load. The high leverage and the high operating and interest expenses of the company raise a red flag and help explain the decimation of the dividend in 2020. The -90% plunge of the stock in the first month of the pandemic in 2020 is a testament to the risk of the stock. Whenever the next downturn in the energy sector shows up, Targa will come under pressure.

Final Thoughts & Recommendation

Targa has more than doubled this year thanks to its positive business momentum. We are cautious over the rich valuation of the stock. Targa could offer a -6.7% average annual return over the next five years, as 5.0% growth and a 1.5% dividend may be offset by a -13.5% valuation headwind. The stock receives a sell rating. Targa is likely to keep growing its cash flows significantly thanks to its pipeline of growth projects, but we note its volatile performance and its extreme sensitivity to downturns in the energy sector.
