## Overview & Current Events

Philip Morris International is a tobacco company that came into being when its parent company Altria (MO) spun off its international operations. Philip Morris sells cigarettes under the Marlboro brand, among others, internationally. Its sister company Altria sells the Marlboro brand (among others) in the U.S. Philip Morris has a \$263.4 billion market cap. On April 23<sup>rd</sup>, 2025, Philip Morris reported its Q1 results for the period ending March 31<sup>st</sup>, 2025. For the quarter, the company posted net revenues of \$9.3 billion, up 5.8% year-over-year. Adjusted EPS was \$1.69, up 12.7% compared to Q1 2024. In constant currency, adjusted EPS grew by 17.3%.

Total shipment volumes were up 3.9% collectively, driven by strength in smoke-free categories. Notably, combustibles continued to show resilience, with volumes rising 1.1%. Specifically, shipment volumes in cigarettes, heated tobacco, and oral products rose 1.1%, 11.9%, and 27.2%, respectively. Price increases, especially in combustibles, also played a key role in driving revenue.

Management updated its fiscal 2025 targets. They now expect GAAP EPS to be between \$7.01 and \$7.14, up from last year's \$4.52. Note that the GAAP figure includes \$0.50 per share in amortization of intangibles. Therefore, we use the midpoint of management's adjusted EPS target range of \$7.36 to \$7.49. This midpoint implies a year-over-year growth of 13.1% and represents a new record for adjusted EPS (compared to FY 2024's \$6.57). All past EPS figures are in GAAP.

## Growth on a Per-Share Basis

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2030
<b>EPS</b>	\$4.42	\$4.48	\$3.88	\$5.08	\$4.61	\$5.16	\$5.83	\$5.81	\$5.02	\$4.52	<b>\$7.43</b>	<b>\$11.42</b>
<b>DPS</b>	\$4.04	\$4.12	\$4.22	\$4.49	\$4.62	\$4.74	\$4.90	\$5.04	\$5.14	\$5.30	<b>\$5.40</b>	<b>\$6.26</b>
<b>Shares<sup>2</sup></b>	1,549	1,551	1,553	1,554	1,555	1,558	1,559	1,552	1,553	1,561	<b>1,561</b>	<b>1,500</b>

When the spin-off of Philip Morris was announced, the market assumed that Altria, the U.S. business, would be the low-growth company, and that Philip Morris International, the non-U.S. business, would be the high-growth company. It looked like this would come true through 2013, as Philip Morris recorded near double-digit earnings-per-share growth through the first five years of its existence. This changed in the following years, as Philip Morris' profits declined and stagnated. Even during 2019, prior to the pandemic, EPS remained below the peak set in 2013. Currency rates are a major factor for Philip Morris' profitability, as all the company's revenues are generated outside of the U.S.

Philip Morris' weak profit growth between 2018 and 2020 was due to large investments in IQOS/Heatsticks technology. The high costs of developing the device and scaling production impacted short-term profitability, but the company is now seeing strong returns. The global expansion of IQOS, including the ILUMA model, has improved net income and enhanced margin mix. Also, the acquisition of Swedish Match in 2022 has been accretive to EPS, with Zyn nicotine pouches driving exceptional revenue growth and accelerating PMI's transition to smoke-free products. We now anticipate growth of 9% per annum coming off a baseline of \$7.43 in EPS moving forward.

## Valuation Analysis

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	Now	2030
Avg. P/E	18.8	21.5	23.4	17.3	15.7	15.0	16.4	17.0	18.2	23.0	22.9	20.0
Avg. Yld.	4.9%	4.3%	3.8%	5.1%	5.7%	6.1%	4.9%	5.2%	5.6%	5.1%	3.2%	2.7%

Shares of Philip Morris traded at an elevated valuation in the 2015 through 2017 period, but otherwise, a mid-teens P/E has been typical. At a P/E of 22.9 times management's target adjusted EPS, today, the stock seems overvalued. Our fair P/E estimate is set at 20.0, taking into account our optimistic outlook for sustained growth. It also considers a discount applied to the stock due to its controversial nature, which has led institutional investors to divert from ownership. This trend may be on a reversal path given the company's renewed growth lately. Still, we remain prudent.

## Safety, Quality, Competitive Advantage, & Recession Resiliency

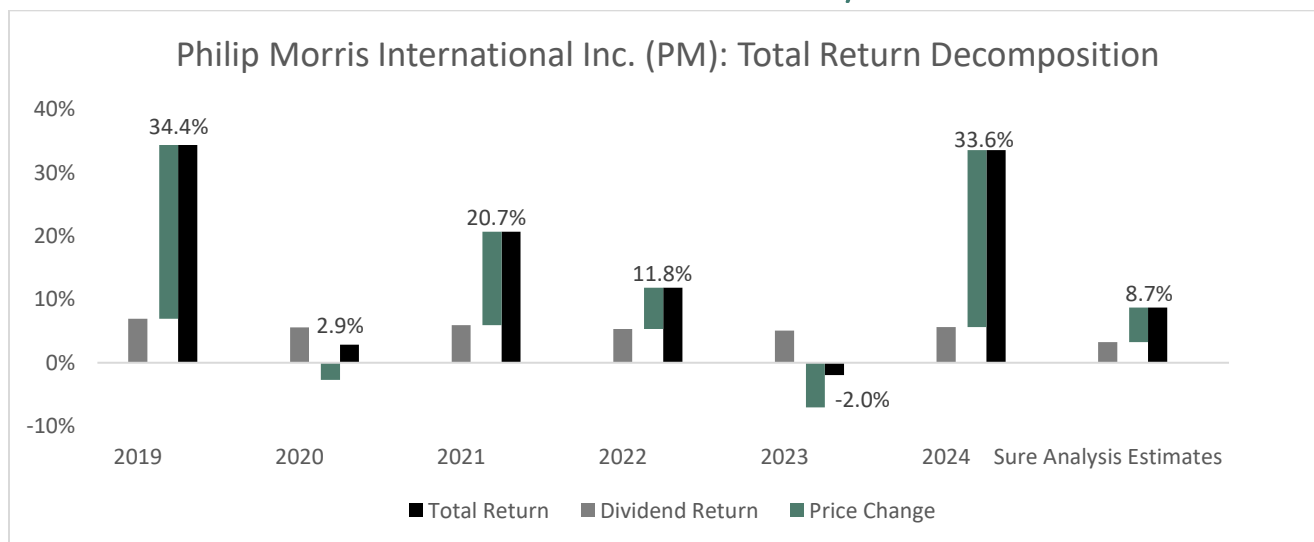

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2030
Payout	91%	92%	109%	88%	100%	92%	84%	87%	102%	117%	73%	55%

Philip Morris' dividend payout ratio has never been especially low, and the ratio increased further during the last decade. At the peak, Philip Morris has paid out more than 100% of its net profits to its owners. Due to strong cash generation, low capex requirements and the stability of Philip Morris' business model during recessions the dividend remains relatively well-covered. Despite the ongoing war in Ukraine and overall tough trading environment, improved earnings have relaxed the payout ratio lately. In terms of a competitive advantage, Philip Morris has one of the most valuable cigarette brands in the world, Marlboro, and is a leader in the reduced-risk product segment with iQOS. At the same time, the company's massive scale allows for tremendous cost advantages. This means that Philip Morris is generally a low-risk business, with regulation being the exception. Smoking bans can affect the company's results, although Philip Morris is safer in this regard than many other tobacco companies due to its geographic diversification.

## Final Thoughts & Recommendation

Philip Morris kicked off 2025 on a high note. The company posted robust growth in sales and EPS, while management's outlook points toward sustained momentum moving forward. The ongoing swift adoption of heated tobacco and new oral offerings should continue to be favorable catalysts to earnings growth. Based on our growth estimates, the 3.2% starting yield, and the possibility of a valuation headwind, the stock's return potential through 2030 comes in at 8.7% per annum. We rate Philip Morris as a hold.
