Overview & Current Events

Seagate Technologies is a provides data storage products and data storage solutions to its customers. The company's portfolio of products offers a variety of products that meet the needs of its customers, such as hard disk drives, solid state hybrid drives, solid state drives, storage subsystems and computing solutions. Seagate Technologies was founded in 1978 and is headquartered in Dublin, Ireland. The company generated \$6.6 billion of revenue last fiscal year and trades with a market capitalization \$19 billion.

On January 21st, 2025, Seagate Technologies announced that it was increasing its quarterly dividend 2.9% to \$0.72 per share.

On April 29th, 2025, Seagate Technologies announced results for the third quarter of fiscal year 2025 for the period ending March 28th, 2025. For the quarter, revenue surged more than 30% to \$2.16 billion, which beat estimates by \$30 million. Adjusted earnings-per-share of \$1.90 compared to \$0.33 in the prior fiscal year and was \$0.16 better than expected.

Growth was powered by strength in nearline cloud and positive pricing action. Revenue was down 7.3% sequentially, ending the company's streak of seven consecutive quarters of revenue growth. Gross margin improved ~70 basis points to 36.2% on a sequential basis and was up over 1,000 basis points year-over-year. The operating margin of 23.5% represented a 40 basis point improvement from Q2 2025 and 1,240 basis point increase from Q3 2024. Adjusted EBITDA was up slightly to \$491 million. The company's free cash flow grew 44% quarter-over-quarter to \$216 million.

Seagate Technologies provided guidance for fourth quarter of fiscal year 2025 as well, with the company expecting revenue of ~\$2.4 billion and adjusted earnings-per-share in a range of \$2.20 to \$2.60. Using the midpoint of company guidance, we projected that that the company will earn \$7.91 in 2025.

Growth on a Per-Share Basis

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2030
EPS	\$4.57	\$2.26	\$4.12	\$5.52	\$4.82	\$4.95	\$5.64	\$8.18	\$0.19	\$1.58	\$7.91	\$9.62
DPS	\$2.05	\$2.43	\$2.52	\$2.52	\$2.52	\$2.60	\$2.68	\$2.80	\$2.80	\$2.80	\$2.88	\$3.18
Shares¹	315	299	292	287	278	260	233	217	207	210	205	200

Seagate Technologies' profitability varied widely over the last decade, from a small net loss during the last financial crisis up to record profits in 2012. The company's overall performance has been quite inconsistent in the past. Seagate Technologies' earnings-per-share have declined by 11% over the last decade, but we believe the company can produce EPS growth of 4% annually over the next five years.

Following Seagate Technologies' strong earnings growth in calendar year 2018, 2019 was a down year for the company, due to generally weaker chip and memory markets. Things started to improve during the last couple of quarters, though, and 2020 was a more profitable year. The past few years have been weaker, but the company has guided towards growth for the current fiscal year. In the past, Seagate Technologies has lowered its operating expenses in order to grow

its profits. It is, however, unclear whether the company can continue to lower its R&D and sales expenses without hurting revenue growth in the long run. We believe that it is prudent to assume that more expense cutting will be harder to achieve moving forward, margins will thus not grow much in the future. Over the coming years, Seagate Technologies should benefit from demand growth for storage products. This demand was seen in the most recent quarter. Over the last five years, demand for Nearline HDDs, an intermediate type of data storage that makes up a sizable portion Seagate Technologies’ HDD sales, has risen by a significant amount. Tailwinds such as the IoT result in a positive long-term sales growth outlook.

Valuation Analysis

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	Now	2030
Avg. P/E	12.9	15.8	9.6	10.1	10.0	9.7	15.6	8.7	326	65.4	11.5	11.0
Avg. Yld.	3.5%	6.8%	6.4%	4.4%	5.3%	5.4%	3.0%	3.9%	4.5%	2.7%	3.2%	3.0%

Shares are down 5.2% since our last report. Seagate Technologies has been valued at a price-to-earnings multiple that has moved in a very wide range. Excluding the last two years, the stock has an average P/E of 12. Today, shares are trading at 11.5 times earnings estimates, which is above our target P/E of 11. Reaching our target valuation by 2030 would reduce annual returns by 0.9% over this period. Shares yield 3.2%, but dividend growth has been weak.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2030
Payout	45%	108%	61%	46%	52%	53%	48%	34%	NMF	177%	36%	33%

While Seagate Technologies has paid growing or stable dividends since 2011, the dividend payout ratio has ballooned towards unsustainable levels. This is especially true for the last two years. The fact that Seagate Technologies has managed to at least maintain its dividend over the last 10 years is impressive, but those looking for aggressive dividend growth will likely be disappointed by the company.

Seagate Technologies is one of the largest data storage companies in the world. It therefore is a major player in this relatively narrow, focused industry. Due to consolidation over the last few years, the industry has turned into an oligopoly, which has been beneficial for margins, and which limits competitive threats. Demand for storage products, and especially the prices for Seagate’s products can be cyclical, which is why profits have been quite volatile in the past.

Final Thoughts & Recommendation

After third quarter results, Seagate Technologies is projected to return 5.9% per year through fiscal year 2030, up from 3.6% previously. This estimate stems from earnings growth of 4% and a start dividend yield of 3.2% that are partially offset by multiple compression. Shares now earn a hold rating due to projected returns.
