Overview & Current Events

Timken is an industrial company focused on making bearings, belts, gear drives, and other such assorted products. The company is heavily involved in vehicles but also sells to aerospace, energy, and agricultural end markets among others. Timken historically was also a significant player in the steel industry, but it spun off that business in 2014.

Timken has generally been viewed as a cyclical company prone to booms and busts. However, management has refocused operations around new verticals, such as renewable energy applications, which should have a more sustained demand growth profile. Timken also completed the acquisition of Spinea in 2022. In 2023, Timken announced additional acquisitions of American Roller Bearing Company, and Nadella, a European firm which makes industrial motion solutions along with a number of additional smaller acquisitions for that industrial motion division.

Timken delivered downbeat Q1 earnings figures, which were released on April 30th, 2025. Revenues of \$1.14 billion fell 4.2% year-over-year. Adjusted earnings of \$1.40 per share slipped from \$1.77 in the year prior and missed expectations.

Timken had a weak 2024, driven by softness in the European market and foreign exchange issues among other headwinds. 2025 looks to be another challenge, as Timken historically has had significant dealings with China and tariffs have cast that business relationship into question. In September 2024, Timken named Tarak Mehta as its new CEO; he was previously the head of ABB's Motion business and electrification products. Mehta will have a challenge on his hands this year due to tariffs and the weak macroeconomic environment. Timken's prior 2025 guidance was already below street estimates and Q1 was another miss versus expectations. We've trimmed our outlook once again.

Growth on a Per-Share Basis

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2030
EPS	\$2.21	\$1.97	\$2.63	\$4.18	\$4.60	\$4.10	\$4.72	\$5.48	\$7.05	\$5.79	\$5.40	\$6.57
DPS	\$1.03	\$1.04	\$1.07	\$1.11	\$1.12	\$1.13	\$1.19	\$1.23	\$1.30	\$1.35	\$1.40	\$1.62
Shares	80	77	78	76	76	76	75	73	71	71	70	68

Timken has had an uneven earnings profile historically. Earnings fell every year sequentially from 2013 through 2016, though this was impacted by the spin-off of the company's former steel business. Earnings jumped dramatically between 2017 and 2019 and have continued rising during the recent pandemic-induced period of economic volatility. The company achieved record results in 2023. But that appears to have been the company's near-term peak, as a more troubled economic environment will limit intermediate-term profit growth.

The company has had a modest approach to capital returns to shareholders. In the early part of the 2010s, Timken repurchased a substantial amount of its stock. Timken continues to operate a share repurchase program today but it has slowed down its pace in recent quarters.

Timken has given investors steady dividend hikes dating back to 2014. They have been conservative in size, though, with the company averaging just a 3% annualized dividend growth rate. The latest dividend hike, announced May 2nd, 2025, was for another 3% increase. Notably, Timken's dividend has been incredibly consistent; it has paid a dividend for 412 consecutive quarters.

Valuation Analysis

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	Now	2030
Avg. P/E	16.1	16.8	17.5	10.9	10.1	12.6	16.4	15.0	11.3	14.3	12.4	14.0
Avg. Yld.	2.9%	3.1%	2.3%	2.4%	2.4%	2.2%	1.5%	1.6%	1.6%	1.6%	2.1%	1.8%

Timken stock has rarely received a high P/E multiple from the market; it's had a historical range of 10 to 20 times earnings over the past decade. Today's P/E multiple represents a slight discount to fair value.

On a yield basis, Timken offered a yield as high as 3% in the wake of the spin-off of the steel business in 2014. However, the yield has settled at or below 2% in recent years. That seems likely to persist, given Timken's increasing focus on growth and M&A of late. The company's current 2.0% dividend yield is slightly above our long-term expectations.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2030
Payout	47%	53%	41%	27%	24%	28%	25%	22%	18%	23%	26%	25%

Timken's overall balance sheet is in fine shape with \$376 million of cash on hand as of March 31st, 2025, and plenty of total assets to manage its short- and long-term debt obligations. In May 2024, the company priced 600 million Euros of debt, due in 2034, at a modest 4.125% annual interest rate. That's a favorable result given recent credit market conditions and shows overall confidence in Timken's financial situation. Timken's profitability has improved in recent years, and it has the financial capacity to withstand a significant recession.

The company's dividend is also well-covered from earnings. The payout ratio has fallen from a high of 53% in 2016 to just 25% now. This seemingly gives the company room for faster dividend increases in the future.

Final Thoughts & Recommendation

Historically, investors tended to view Timken as a lower-quality cyclical business. For several years coming out of the pandemic, it appeared that Timken was enjoying stronger pricing power and improving business quality. However, 2025's much softer industrial market outlook has put a temporary pause to Timken's longer-term growth strategy. Timken's near-term prospects are muted. However, the share price has pulled back since our last report, which has increased our annualized return outlook to a respectable 8.2% going forward. Shares earn a hold rating today.
