Overview & Current Events

Targa Resources is a leading provider of midstream services and one of the largest independent midstream energy companies in North America. The company is primarily engaged in the business of gathering, processing, transporting and selling natural gas and natural gas liquids (NGLs). It also gathers and stores crude oil and refined products. It has the largest gathering and processing position in the Permian Basin and a market capitalization of \$34.8 billion.

Targa was adversely affected by the downturn of the energy market in 2014-2016 and it took the company a whole decade to recover from that downturn. Its distributable cash flow (DCF) per share reached the level it was in 2015 last year. Moreover, its stock price plunged -90% from mid-2014 to early 2016 and it retrieved its losses only in early 2025.

On July 29th, 2022, Targa acquired Lucid Energy for \$3.55 billion in cash. Lucid provides natural gas gathering, treating and processing services in the Delaware Basin, with more than 1,000 miles of natural gas pipelines.

In early May, Targa reported (5/1/25) financial results for the first quarter of fiscal 2025. Adjusted EBITDA grew 22% over the prior year's quarter, to a new all-time high, thanks to strong growth in Permian, NGL transportation and fractionation volumes. The contribution from recently completed projects was significant. Management reiterated its strong guidance for 2025, expecting adjusted EBITDA of \$4.65-\$4.85 billion, thus implying 15% growth at the mid-point. Accordingly, we still expect cash flow per share of approximately \$17.80 this year.

Due to the pandemic, Targa cut its quarterly dividend by -89% in 2020 but it has raised its dividend four times since then. Management has raised the quarterly dividend from \$0.75 to \$1.00 this year and has stated that it expects to keep raising the dividend for many more years. Targa has net debt of \$18.7 billion but it can service its debt thanks to the cash flows from recently completed projects.

Growth on a Per-Share Basis

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2030
CFPS	\$13.40	\$2.68	\$3.08	\$4.06	\$4.07	\$5.05	\$6.74	\$9.86	\$11.53	\$15.45	\$17.80	\$22.72
DPS	\$3.53	\$3.64	\$3.64	\$3.64	\$3.64	\$1.21	\$0.40	\$1.40	\$1.85	\$2.75	\$4.00	\$5.36
Shares²	56.0	184.7	217.6	232.1	232.5	229.2	228.6	229.9	224.5	218.3	215.0	220.0

Midstream companies usually have more stable performance than upstream energy stocks. However, this has not been the case for Targa, which has a markedly volatile performance record throughout the last decade. On the bright side, Targa currently has decent growth prospects, as many growth projects have come online in the last five years and the company has a long pipeline of growth projects. These projects will contribute significant, mostly fee-based cash flows.

On the other hand, Targa has greatly diluted its unitholders in the last decade. It also has a material debt load, with its net debt standing at \$18.7 billion or about 4.5 *times last year's EBITDA* and its interest expense consumes 28% of its operating income. In 2019, Targa issued 10-year bonds at a 6.875% rate, which shows the desperation of Targa for funds. Overall, we expect cash flow per share to grow by 5% per year on average over the next five years.

Valuation Analysis

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	Now	2030
Avg. P/CF	5.7	14.7	16.1	12.1	9.7	4.1	6.2	7.0	6.8	9.1	9.0	7.9
Avg. Yld.	4.6%	9.2%	7.3%	7.4%	9.2%	5.8%	1.0%	2.0%	2.3%	2.0%	2.5%	3.0%

Targa is currently trading at a price-to-cash flow ratio of 9.0, which is higher than the 7-year average of 7.9 of the stock. If Targa trades at its historical average valuation level in five years, it will incur a -2.7% annualized drag due to the contraction of its cash flow multiple.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2030
Payout	33.9%	136%	118%	89.7%	89.3%	24.0%	5.9%	14.2%	16.0%	17.8%	22.5%	23.6%

Thanks to its industry position, Targa benefits from the integration of its assets and some economies of scale. While this is a competitive advantage, the volatile performance record reveals the vulnerability of the company to the gyrations of commodity prices, which are beyond its control. Targa is a risky security with a material debt load. The high leverage and the high operating and interest expenses of the company raise a red flag and help explain the decimation of the dividend in 2020. The -90% plunge of the stock in the first month of the pandemic in 2020 is a testament to the risk of the stock. Whenever the next downturn in the energy sector shows up, Targa is likely to come under pressure.

Final Thoughts & Recommendation

Targa has positive business momentum but this has been priced, at least in part, in the stock. Targa could offer a 4.8% average annual return over the next five years, as 5.0% growth and a 2.5% dividend may be partly offset by a -2.7% valuation headwind. The stock receives a hold rating. Targa is likely to keep growing its cash flows significantly thanks to its pipeline of growth projects, but we note its volatile performance and its extreme sensitivity to downturns in the energy sector.
