Overview & Current Events

Novartis researches, develops, and markets products to improve patients' health. The company offers medicines in the areas of oncology, cardiovascular, dermatology, respiratory, and several others. Novartis employs 76,000 people and has annual sales of about \$54 billion. Novartis is incorporated in Switzerland, but U.S. investors have access to the company through an American Depositary Receipt, or ADR.

On October 4th, 2023, Novartis spun off its generic drug business Sandoz into a standalone company under the ticker symbol (SDZNY).

On February 20th, 2025, Novartis announced that it was raising its annual dividend 6.8% to \$3.994.

On July 17th, 2025, Novartis announced second quarter results for the period ending June 30th, 2025. All figures are in U.S. dollars. For the quarter, revenue grew 12.3% to \$14.1 billion and matched estimates. Adjusted earnings-per-share of \$2.42 compared to \$1.92 in the prior year and was \$0.05 better than expected.

Volume improved 12% and pricing added 1% to results, but these gains were offset by a 2% headwind from generic competition. Revenue for *Entresto*, which is used to treat chronic heart failure and is the company's top grossing product, grew by 22% to \$2.36 billion as demand remains strong throughout the world. *Cosentyx*, which treats plaque psoriasis, increased 6% to \$1.63 billion as demand remains high in the U.S. and Europe due to recent launches and volume gains in core indications. *Kisqali*, which is used to treat certain types of breast cancer, improved 64% to \$1.18 billion due to demand across all regions, including 100% growth in the U.S. Peak sales for the drug could reach \$7 billion annually. Revenue for *Kesimpta*, which is used to treat patients with relapsing multiple sclerosis, grew 33% to \$1.08 billion during the quarter due once again to higher demand and increased access. *Pluvicto*, which treats metastatic castration-resistant prostate cancer in adults, grew 30% due to higher uptake levels in the U.S. following approvals for use. The drug could produce as much as \$5 billion annually as the company builds out manufacturing and approvals are received in additional markets. Novartis repurchased a total of 48.8 million shares at an average price of ~\$108 during the first half of the year. Additionally, the company initiated a \$10 billion share repurchase authorization that is scheduled to be completed by the end of 2027.

We expect Novartis to earn \$9.06 in 2025, up from \$8.83 and \$8.59 previously. The company still expects sales growth in the high single-digits, up from mid-single-digits to high single-digits previously.

Growth on a Per-Share Basis

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2030

Novartis AG (NVS)

Updated July 18th, 2025, by Nathan Parsh

Novartis increased earnings at a rate of 11.6% per year over the last decade and 9.4% over the last five years. The company has proven itself recession-resistant as it saw growth during the last recession. Healthcare companies often perform well during recessions as people will seek out treatments for ailments regardless of the economic climate. Due to continued strength of the company's top selling products, we are reiterating our expect earnings-per-share annual growth rate of 4%.

Novartis pays an annual dividend, with the company now having increased its dividend 29 consecutive years in local currency. The dividend for U.S. investors was maintained in 2016 and 2017 after being cut slightly in 2015 due to currency exchange. Dividends are declared in Swiss Francs.

Valuation Analysis

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	Now	2030
Avg. P/E	33.3	27.3	24.5	15.2	28.4	24.6	13.9	14.8	14.8	12.5	12.6	16.0
Avg. Yld.	2.7%	3.5%	3.4%	3.6%	3.2%	3.5%	3.7%	3.7%	3.5%	3.8%	3.5%	2.8%

Shares of Novartis have increased \$3, or 2.7%, since our May 7th, 2025 update. Shares have an average P/E of nearly 21 over the last decade, but this figure falls to 16.1 when looking at the last five years. We believe this is a good target earnings multiple for the stock. This valuation is a premium to most peers, but we feel that the growth in the company's key products, as well as the expectation for new products to produce strong results, warrants the slight premium. Novartis trades at 12.6 times earnings estimates for the year. If shares were to reach our target by 2030, then valuation could add 4.9% to annual returns over this period.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2030
Payout	91%	97%	83%	57%	49%	53%	51%	54%	51%	48%	44%	44%

The chief competitive advantage for Novartis is its Innovative Medicines division, which has shown impressive growth over the last year. Seven different products have reached the \$1.5 billion annual sales mark. Another key advantage for the company is Novartis' willingness to spend on research and development. The company spends more than \$10 billion annually on R&D. This level of R&D spending should pay off as Novartis expects to bring to market about 20 different products over the next few years with the potential for at least a billion dollars in peak sales.

Final Thoughts & Recommendation

Novartis is now expected to return 11.8% annually through 2030, down slightly from our prior estimate of 11.9%. This projection stems from a 4% earnings growth rate, a starting yield of 3.5%, and a mid-single-digit contribution from multiple expansion. Novartis' most important products continue to show strong growth rates, especially the newer drugs. We have raised our five-year price target \$4 to \$176 due to earnings estimates for the year. We continue to rate shares of Novartis as a buy due to projected returns and a solid dividend risk score.
