Overview & Current Events

Founded in 1971, Devon Energy Corporation (DVN) is an independent energy company engaged primarily in the exploration, development and production of oil, natural gas and NGLs. On January 7th, 2021, Devon and WPX Energy completed an all-stock merger of equals. The \$21.3 billion market cap company benefits from enhanced scale, improved margins, higher free cash flow, and the financial strength to accelerate the return of cash to shareholders through a “fixed plus variable” dividend strategy.

On August 6, 2025, Devon Energy reported results for the second quarter ended June 30, 2025, with earnings reflecting resilient oil and gas production amid a challenging pricing environment. The company generated net earnings of \$720 million, or \$1.09 per diluted share, compared with \$970 million, or \$1.45 per share, in the same quarter of 2024. Adjusted earnings came in at \$1.13 per share, down from \$1.46, as lower commodity prices offset strong production volumes. Total revenue was \$4.05 billion, compared with \$4.32 billion a year earlier, reflecting weaker realized oil and natural gas prices despite higher sales volumes. Production averaged 663,000 barrels of oil equivalent per day, up 4% year-over-year, with oil production accounting for 51% of the total. The company maintained strong operational efficiency, with lease operating expenses at \$5.09 per barrel of oil equivalent and capital expenditures of \$1.02 billion in the quarter, consistent with its development program. Free cash flow generation totalled \$435 million, supporting shareholder returns through a fixed-plus-variable dividend framework. Devon declared a dividend of \$0.48 per share for the quarter, including a \$0.21 fixed dividend and a \$0.27 variable component, marking the twelfth consecutive quarter of supplemental dividends. The balance sheet remained conservative with net debt-to-EBITDA at 0.8 times and liquidity of \$4.3 billion, comprised of cash and credit capacity. Management reaffirmed full-year 2025 production guidance of 655,000 to 675,000 barrels of oil equivalent per day and capital spending of \$3.9 billion to \$4.3 billion. Overall, the quarter demonstrated Devon’s ability to sustain robust production, deliver free cash flow, and return capital to shareholders despite commodity price pressures.

Growth on a Per-Share Basis

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2030
EPS	\$2.52	-\$0.13	\$1.84	\$1.19	\$1.38	-\$0.12	\$3.53	\$8.31	\$5.84	\$4.56	\$4.01	\$5.00
DPS	\$0.96	\$0.42	\$0.24	\$0.30	\$0.35	\$0.68	\$1.97	\$0.69	\$0.80	\$1.45	\$0.96	\$1.40
Shares¹	441.3	524.6	526.1	438.3	382.9	673.1	664.2	654.0	634.6	648.6	634.8	630.0

Devon Energy is positioned for solid growth over the next five years, with earnings per share projected to rise to \$5.00, reflecting improved operational efficiency and strong commodity pricing. The company’s dividend per share is expected to increase from \$0.96 to \$1.40, indicating a commitment to shareholder returns. Devon’s disciplined capital allocation, focus on low-cost production, and strategic acquisitions should drive sustainable cash flow growth. While oil price volatility remains a risk, its variable dividend structure and balance sheet strength provide resilience. If market conditions remain favorable, Devon could deliver strong total returns to investors.

Valuation Analysis

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	Now	2030
Avg. P/E	19.9	NA	23.3	29.5	22.1	NA	10.2	4.8	7.8	11.1	8.5	9.0
Avg. Yld.	1.9%	0.9%	0.6%	0.9%	1.1%	2.6%	5.5%	1.7%	1.8%	2.9%	2.8%	3.1%

DVN is currently trading at a P/E ratio of 8.5, which is well below its historical average and significantly lower than the peak valuations seen in prior years, such as 29.5 in 2018. This suggests that the market is currently valuing DVN conservatively, likely due to commodity price volatility, concerns about energy sector cyclicalities, and investor uncertainty about long-term oil and gas demand. The 10-year historical average P/E is approximately 15, but given DVN's recent transformation into a more disciplined, cash-flow-focused energy company, a more realistic fair multiple over the next five years is likely between 9-12, assuming stable oil prices and continued strong financial performance. If oil prices remain favorable, DVN's multiple could expand toward 12-15, but if commodity prices weaken, it could remain in the 6-9 range. The dividend yield of 2.8% is higher than pre-2020 levels, reflecting DVN's commitment to returning capital to shareholders, but lower than its peak 5.5% in 2021. If the company continues its disciplined capital return strategy, dividend growth is likely, though yield compression could occur.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2030
Payout	38%	-323%	13%	25%	25%	-567%	56%	8%	14%	32%	24%	28%

DVN's competitive advantage lies in its disciplined capital allocation strategy, low-cost production, and strong free cash flow generation. Following its merger with WPX Energy, DVN has transformed into a high-margin, capital-efficient oil and gas producer with a focus on shareholder returns rather than aggressive production growth. The company benefits from premier acreage in U.S. shale plays, particularly the Permian Basin, which offers low breakeven costs and strong production economics, efficient capital deployment, allowing for high returns on invested capital, and a flexible capital return strategy, balancing dividends and share buybacks. During the 2008-2009 recession, DVN saw earnings decline due to collapsing oil prices but remained operationally strong through cost discipline and a solid asset base. The 2014-2016 oil crash was more severe, prompting debt reduction, asset sales, and restructuring to stabilize finances. In 2020, the COVID-19-driven downturn led to negative earnings, but the WPX merger strengthened DVN's financial position, making it more resilient. The 2021-2022 energy boom boosted earnings, though the P/E ratio remained low due to cyclical concerns. DVN has significantly reduced debt, maintaining strong interest coverage and capital discipline. With minimal near-term maturities, it has flexibility in capital allocation, supporting dividends and buybacks while managing oil price volatility. The payout ratio now sits at a sustainable 24%, balancing shareholder returns with reinvestment.

Final Thoughts & Recommendation

Between its 2.8% dividend yield, 4.5% expected five-year EPS CAGR, and 1.2% expected five-year valuation multiple CAGR, we project an 8.5% annualized total return for DVN over the next half-decade, making it a Hold at the moment.
