Overview & Current Events

Orchid Island Capital, Inc. is a Real Estate Investment Trust, or REIT, operating in the mortgage industry. Mortgage REITs differ from most other REITs. For example, traditional REITs typically own a portfolio of physical real estate, which they lease to tenants to collect rental income. Mortgage REITs are purely financial entities, and Orchid Island does not own any physical properties. Instead, it is an externally managed REIT (by Bimini Advisors LLC) that invests in residential mortgage-backed securities (RMBS), either pass-through or structured agency RMBSs, which are financial instruments that collect cash flow based on residential loans such as mortgages, including subprime, and home-equity loans.

On July 24, 2025, Orchid Island Capital, Inc. reported its financial results for the second quarter of 2025. The company recorded a net loss of \$33.6 million, or \$0.29 per common share, driven by net interest income of \$23.2 million, total expenses of \$5.0 million, and net realized and unrealized losses of \$51.7 million on RMBS and derivatives. Dividends declared and paid were \$0.36 per common share, with book value per share at \$7.21 by June 30, 2025, reflecting a total return of (4.66)%. Liquidity remained strong at \$492.5 million, comprising cash and unpledged securities, representing 54% of stockholders' equity, with borrowing capacity exceeding \$6.7 billion across 24 lenders.

The adjusted leverage ratio was 7.3:1. Prepayments totaled \$199.2 million, with a 3-month CPR of 10.1%. The portfolio, valued at \$6.993 billion, was predominantly fixed-rate RMBS at 99.8%, with an average coupon of 5.42%. Management noted market volatility due to tariffs and domestic policy shifts, impacting Agency RMBS negatively, leading to balance sheet reduction and modest permanent losses. Despite this, the company increased its capital base while maintaining lower leverage, positioning itself for potential market recovery.

Growth on a Per-Share Basis

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2030
BPS	\$58.20	\$50.50	\$43.55	\$34.20	\$31.35	\$27.30	\$21.70	\$11.93	\$9.10	\$8.09	\$7.21	\$6.00
EPS	\$12.52	\$12.95	\$11.34	\$6.92	\$4.29	\$5.98	\$4.64	\$2.20	(\$0.96)	(\$0.17)	\$0.60	\$2.00
DPS	\$9.60	\$8.40	\$8.40	\$5.35	\$4.80	\$3.95	\$3.90	\$1.14	\$1.44	\$1.44	\$1.44	\$1.55
Shares³	4.4	6.6	10.6	9.7	13.0	17.0	35.4	39.1	51.3	93.3	126.7	100.0

Orchid Island has experienced extreme earnings volatility over the past several years, with a net loss in 2013 and 2018, along with multiple years in which the trust barely generated a profit. As a result, we are using book value per share as an alternate metric to earnings-per-share. The growth outlook for mortgage REITs is challenged. Mortgage REITs make money by borrowing at short-term rates and lending at longer-term rates, then pocketing the difference. This is referred to as the spread, which is how Orchid Capital generates its cash flow. When the spread between short-term rates and long-term rates compresses, profitability erodes at a rapid pace. This is why mortgage REITs can be dangerous if the yield curve flattens. Moving forward, we expect the book value per share to continue declining in the coming years and the high payout will result in weakening earnings per share and dividends per share.

Valuation Analysis

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	Now	2030
Avg. P/B	1.0	1.0	1.2	0.9	0.9	1.0	0.9	0.9	1.0	1.1	1.0	0.9
Avg. Yld.	16.8%	16.3%	16.5%	16.8%	16.8%	14.2%	19.1%	10.6%	15.8%	16.2%	20.7%	28.7%

Since we are using book value instead of earnings-per-share, we will also use the price-to-book ratio for valuation instead of the price-to-earnings ratio. The stock presently has a price-to-book ratio of 1.0, which is roughly in line with our fair value estimate of 0.9 which accounts for uncertainties and risks facing the business. Some investors may be enticed by the extremely high dividend yield for the stock, which drives the investment thesis. However, we offer two cautionary notes. First, the dividend has already been cut multiple times since 2015. Second, and just as important, is that despite an exceptionally high starting yield, total returns can be dampened significantly by the erosion in the share price as time goes on.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2030
Payout	77%	65%	74%	77%	112%	66%	84%	52%	-150%	NA	240%	78%

Orchid Island is not a safe stock. The above payout ratios are extreme due to low or non-existent earnings. Mortgage REITs are exposed to a number of risks, including interest rate risk, as well as credit risk. These risks pertain to the direction of interest rates, as well as the ability of borrowers to repay the mortgage loans. Moreover, mortgage REITs do not possess many competitive advantages. Since mortgage REITs do not provide differentiated products and services, traditional competitive advantages such as brand power or manufacturing efficiencies do not apply. In addition, Orchid Island is not a recession-resistant trust. A recession generally leads to higher mortgage defaults.

Final Thoughts & Recommendation

Orchid Island Capital offers an extremely attractive dividend yield. That said, it is an extremely risky stock due to its track record of consistently destroying shareholder capital and slashing its dividend repeatedly. Given that the economy is facing growing risks and headwinds, we expect book value and dividend erosion in the coming years, and the payout ratio is very high as well. We therefore rate the stock as a Sell.
