## Overview & Current Events

Whitecap Resources is a Canadian energy company engaged in the acquisition, development, and production of oil and natural gas across Western Canada. Whitecap operates through four core regions: Northern Alberta & British Columbia, Central Alberta, Eastern Saskatchewan, and Western Saskatchewan. Its asset base is characterized by high-netback, low-decline production and significant infrastructure ownership. The company's portfolio has both light and medium crude oil assets, supported by owned and operated infrastructure such as gas plants and processing facilities. It markets its production domestically and into the U.S., with exposure to benchmark pricing through various sales channels. It pays dividends on a monthly basis. It reports its financials in CAD. All figures in this report have been converted to USD unless otherwise noted. The stock trades at a market cap of \$9 billion.

On May 12<sup>th</sup>, 2025, Whitecap Resources successfully completed its strategic combination with Veren, making it Canada's seventh largest oil and natural gas producer and fifth largest natural gas producer. The merger also positioned Whitecap as the largest landholder in Alberta's Montney and Duvernay plays and a leading light oil producer in Saskatchewan.

On July 9<sup>th</sup>, 2025, Whitecap Resources changed its OTC ticker from SPGYF to WCPRF after upgrading to the OTCQX.

On October 22<sup>nd</sup>, 2025, Whitecap Resources reported its third-quarter results for the period ending September 30<sup>th</sup>, 2025. For the quarter, revenue was about \$1.20 billion, up from \$642 million in Q3 2024. Funds flow came in at \$646 million, while capital spending totaled \$393 million, resulting in \$252 million of free funds flow. The company realized gains of \$34 million on commodity contracts. Net income was \$147 million, or \$0.12 per share, compared with \$197 million, or \$0.32 per share, in Q3 2024. We expect EPS of \$1.01 for this year.

## Growth on a Per-Share Basis

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2030
EPS	(\$1.27)	\$0.37	(\$0.27)	\$0.11	(\$0.29)	(\$3.55)	\$2.33	\$1.99	\$1.10	\$0.95	<b>\$1.01</b>	<b>\$0.87</b>
DPS	\$0.54	\$0.26	\$0.22	\$0.23	\$0.26	\$0.17	\$0.16	\$0.29	\$0.46	\$0.51	<b>\$0.52</b>	<b>\$0.55</b>
Shares <sup>1</sup>	283.9	341.9	371.8	420.6	412.0	408.4	603.1	621.1	608.6	598.1	<b>941.4</b>	<b>1000</b>

Whitecap's earnings over the past decade have been heavily influenced by the oil price cycle and acquisition activity. From 2015 to 2020, the company experienced persistent earnings volatility, with several years of negative EPS. This period included the 2015–2016 price crash, which led to impairments and weak cash flow, followed by a short recovery that didn't hold. The 2020 pandemic brought a severe downturn, with record-low oil prices and large write-downs, resulting in the lowest EPS of the period.

A sharp turnaround came in 2021 and 2022, as global oil markets tightened. Whitecap benefited from higher commodity prices and transformative acquisitions including NAL, TORC, and XTO Canada, which significantly boosted production and scale. These years marked the company's strongest earnings.

In 2023 and 2024, EPS declined from peak levels as oil prices moderated, differentials widened, and inflation pushed up costs. Nevertheless, Whitecap remained profitable, due to its larger production base and improved operational leverage.

<sup>1</sup> Share count is in millions.

Updated October 24<sup>th</sup>, 2025 by Nikolaos Sismanis

Moving forward, we forecast an annual decline of 3% in EPS from its 2025 levels, due to the possibility of weak oil prices, potential FX headwinds, and a relatively shaky macro environment. We have also assumed a 1% growth rate per year on the dividend, as we don't believe management will be aggressive with dividend hikes considering the current outlook.

## Valuation Analysis

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	Now	2030
Avg. P/E	---	22.6	---	---	---	---	1.7	3.4	6.9	7.8	7.4	6.0
Avg. Yld.	4.8%	3.1%	3.0%	3.5%	6.5%	6.8%	3.9%	4.3%	6.1%	6.9%	6.9%	10.5%

Investors have historically valued Whitecap at low P/E ratios largely because of the highly cyclical and volatile nature of its earnings. As a commodity producer, Whitecap's profitability is tightly linked to swings in oil and gas prices, which are influenced by global supply-demand dynamics, geopolitical events, and macroeconomic conditions. All of these factors are outside the company's control. Today, shares trade at 7.4 times our projected EPS for the year. We believe this is a rather rich multiple for the stock. We believe a P/E of 6x better reflects the significant risks of its dividend sustainability.

## Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2030
Payout	---	70%	---	209%	---	---	7%	15%	42%	54%	51%	63%

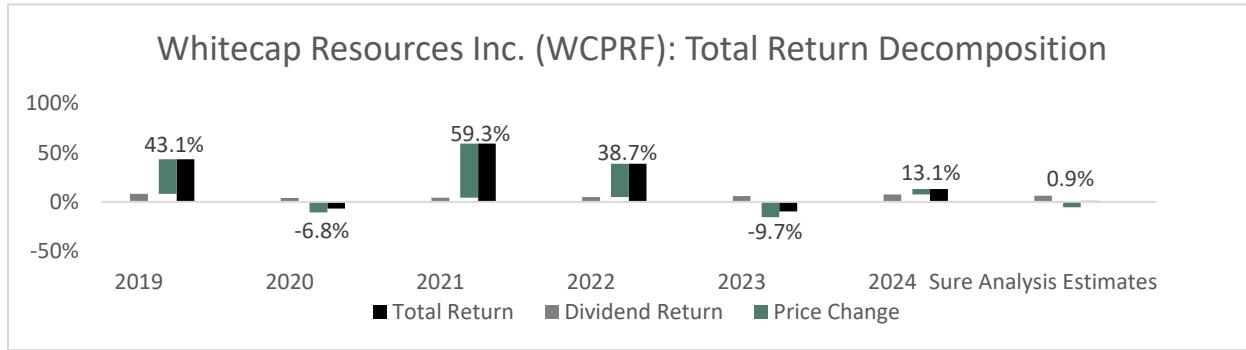

Whitecap operates a high-quality portfolio of low-decline, conventional oil and gas assets across Western Canada, with a strong safety and environmental track record. Its ownership of key infrastructure like gas plants and processing facilities provides cost advantages, operational control, and reliability. The company has also reduced its net debt and improving liquidity, enhancing its ability to weather commodity downturns.

That said, as a pure upstream producer, Whitecap is highly exposed to oil and gas price swings. Earnings can swing wildly with market conditions, limiting recession resilience. The lack of downstream or midstream diversification amplifies this risk. Additionally, regulatory pressures, including emissions targets and carbon pricing, could impact long-term costs and project economics. Despite its scale and efficiency, the business model is fundamentally tied to volatile global energy markets, which is why we remain wary regarding the safety of the dividend despite the modest payout ratio today.

## Final Thoughts & Recommendation

Whitecap offers investors leveraged exposure to oil prices through a high-quality, infrastructure-backed asset base with strong free cash flow potential. Its disciplined capital returns, operational control, and scale make it a compelling choice for those comfortable with commodity risk. However, at its current valuation, we question whether the company will be able to achieve noteworthy returns moving forward, as the starting yield could be offset by declining earnings and a valuation headwind. Regardless, we note that this is a highly speculative stock, as returns will be highly correlated to oil prices that are impossible to predict over many years. The stock earns a speculative hold rating.
