Overview & Current Events

Morningstar was founded in 1984 as a way for investors to seek information about hundreds of popular mutual funds that was out of reach prior to the company's Sourcebook product. Since that time, Morningstar has grown tremendously, serving about nine million clients. It produces ~\$2.4 billion in annual revenue and has a market capitalization of about \$8.7 billion.

Morningstar posted third quarter earnings on October 29th, 2025, and results were better than expected on both the top and bottom lines. Adjusted earnings-per-share came to \$2.55, which was 13 cents ahead of estimates. Revenue was up 8.4% year-over-year to \$617 million, beating expectations by almost \$12 million. Organic revenue was up 9% year-over-year, which excludes acquisitions and divestitures.

Operating income was up 10.6% year-over-year to \$128 million, while adjusted operating income rose almost 16%. Net income per share was up 28% on an adjusted basis. Morningstar noted a further \$1.05 per share gain from the sale of its Commodity and Energy Data business.

Cash from operating activities came to \$196 million while free cash flow was \$160 million. Both were up fractionally year-over-year. Morningstar repurchased \$487 million in shares so far this year, or about 4% of its float. It has a new program to repurchase up to \$1 billion in shares over the next three years.

We have \$9.45 in estimated earnings-per-share for this year as Morningstar is set to produce record earnings once again.

Growth on a Per-Share Basis

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2030
EPS	\$3.00	\$3.72	\$2.88	\$4.25	\$3.52	\$5.40	\$6.36	\$3.87	\$4.69	\$7.89	\$9.45	\$17.41
DPS	\$0.70	\$0.79	\$0.88	\$0.92	\$1.00	\$1.12	\$1.20	\$1.44	\$1.50	\$1.62	\$1.82	\$2.93
Shares²	43	43	43	43	43	43	43	43	43	43	42	41

Morningstar's earnings-per-share history is very strong considering the wide array of economic conditions that have existed in the past decade. The company saw a small dip in earnings at the height of the crisis in 2009 and there have been a couple of other small blips, but it has managed an average growth rate of more than 11% in the past decade. We see growth as continuing at this pace going forward on the strength of PitchBook, in particular, and are therefore forecasting 13% earnings-per-share growth for the coming years.

We think low-double digit revenue growth and a further margin growth potential make 13% earnings-per-share growth look feasible from 2025's level of earnings. This growth estimate is also dependent on the company's appetite for acquisitions moving forward. Its long-term revenue and earnings growth include many acquisitions over time, so we see this estimate as including some additional M&A that has not occurred yet. Morningstar's position in its niche is well established and we see its future as very bright looking forward. It also continues to experience tremendous success with its PitchBook and other licensed products, and the significant costs related to recent mergers should not recur in

future years, which will also help boost margins. We note that high interest rates globally will likely crimp transaction-based revenue for the foreseeable future, but Morningstar has been able to work through these and then some.

Valuation Analysis

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	Now	2030
Avg. P/E	25.8	21.4	28.1	27.2	40.2	29.8	41.1	56.0	61.0	42.7	22.4	38.0
Avg. Yld.	1.0%	1.1%	1.1%	0.9%	0.8%	0.7%	0.5%	0.7%	0.5%	0.5%	0.9%	0.4%

Morningstar’s average price-to-earnings ratio has been very high in the past decade as its trough value was 21.4, set in 2016. Investors have always been willing to pay a premium for this stock, but recently the valuation has been under significant pressure. Morningstar, and other businesses like it with lucrative subscription models, tend to receive premium valuations due to their high rates of recurring revenue and superior profitability. Today’s price-to-earnings ratio of 22.4 is below our estimate of fair value, which we see as 38. Earnings estimates remain high, helping the valuation. With this in mind, the valuation could provide a huge tailwind to total returns. We see the yield remaining below 1% for the foreseeable future; Morningstar is not a high-income stock and almost certainly won’t be for the foreseeable future.

Safety, Quality, Competitive Advantage, & Recession Resiliency

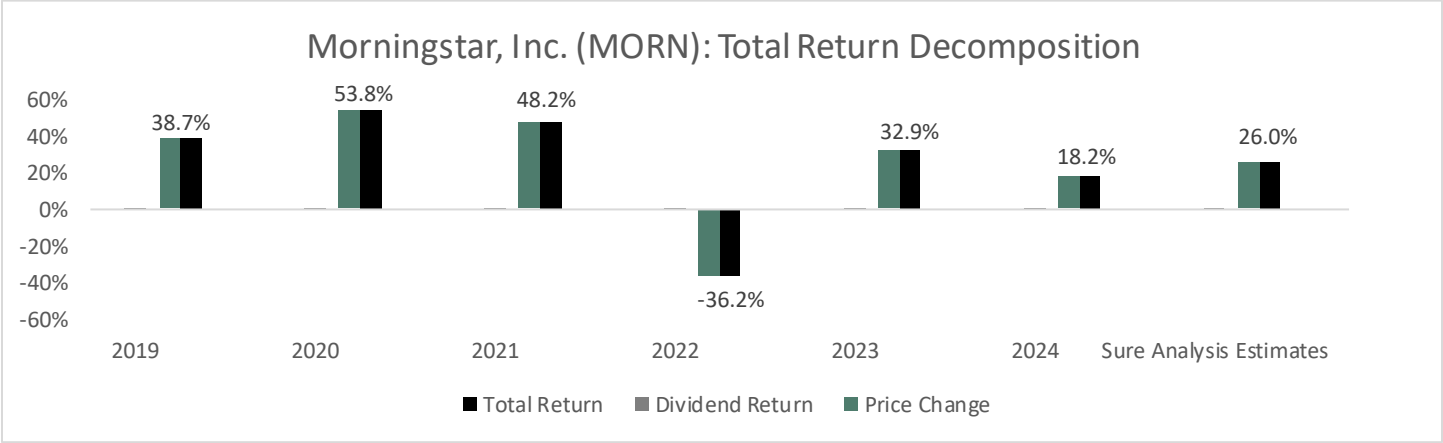

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2030
Payout	25%	24%	32%	24%	32%	22%	23%	39%	32%	21%	19%	17%

Morningstar’s payout ratio is not likely to be above 20% of earnings anytime soon, barring a major shift in capital allocation strategy, so we see the yield as staying quite low for the foreseeable future. Certainly, management has been more interested in investing for future growth, and that strategy isn’t going to change anytime soon. We also see rapidly rising earnings as a way to reduce the payout ratio. Share repurchases have picked up significantly recently. Morningstar’s competitive advantage is in its very long operating history in a niche of the investment world it helped create. The company’s subscription service, particularly with its PitchBook product, is a key differentiator and we see it powering future growth for many years to come.

Final Thoughts & Recommendation

Overall, we see Morningstar as a stock with a strong moat that is undervalued by quite some margin, breaking with a long tradition of the opposite. We are forecasting 26% total annual returns moving forward, as 13% growth and the 0.9% yield could be aided by a huge tailwind from the valuation. With the sizable returns forecast currently, we reiterate the stock at a buy rating, noting the stock is as cheap as it’s been in the past decade.
