## Overview & Current Events

Oxford Square Capital Corp. is a BDC (Business Development Company) specializing in financing early- and middle-stage businesses through loans and investments in collateralized loan obligations. At the end of Q3, the total fair value of Oxford Square's investment portfolio was about \$260.5 million across its debt, CLO equity, and equity/other holdings, allocated about 54.5% to senior secured debt, 43.5% to CLO equity, and roughly 2% to equity or other investments. Last year, the BDC generated roughly \$42.7 million in total investment income. Oxford Square is headquartered in Greenwich, Connecticut.

On November 6<sup>th</sup>, 2025, Oxford Square Capital reported its Q3 results for the period ending September 30<sup>th</sup>, 2025. The company generated approximately \$10.2 million in total investment income, essentially flat compared with \$10.3 million in Q3 2024, as lower stated interest income from debt investments offset higher PIK income and stronger contributions from securitization vehicles.

The weighted average yield on debt investments increased slightly to 14.6% from 14.5% a year earlier. The weighted average yield on CLO equity investments stood at 9.7%, modestly higher than 9.6% in Q3 2024. Total expenses were about \$4.7 million, compared with \$4.2 million in the prior-year period, primarily reflecting higher interest expense tied to the company's outstanding unsecured notes.

Net investment income (NII) came in at \$5.6 million, or \$0.07 per share, versus \$6.2 million, or \$0.10 per share, in Q3 2024. NAV per share was \$1.95 at quarter-end, compared with \$2.35 a year earlier. While the company recognized \$7.5 million in net unrealized depreciation and \$0.2 million in net realized losses during the quarter, this resulted in a modest \$2.1 million decrease in net assets from operations. We have set our FY2025 NII per share forecast at \$0.32.

## Growth on a Per-Share Basis

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2030
<b>NII</b>	\$0.66	\$0.52	\$0.60	\$0.67	\$0.81	\$0.40	\$0.32	\$0.42	\$0.51	\$0.42	<b>\$0.32</b>	<b>\$0.32</b>
<b>DPS</b>	\$1.13	\$1.15	\$0.80	\$0.79	\$0.80	\$0.61	\$0.42	\$0.42	\$0.51	\$0.42	<b>\$0.42</b>	<b>\$0.25</b>
<b>Shares<sup>1</sup></b>	59.8	51.9	51.5	49.7	47.8	49.4	49.6	49.8	53.9	65.5	<b>78.0</b>	<b>90.0</b>

The company's investment income per share has been declining at a 10-year CAGR of 4.9%, as Oxford Square has been failing when it comes to refinancing its investment at attractive yields, resulting in declining investment spreads. Further, the company has been historically over-distributing dividends to shareholders, decaying its NAV, and hence its future income generation due to fewer assets.

Rising interest rates should help boost the company's results in the medium-term. Still, with the company's investments declining in value and a generally falling NAV creating a downward spiral on reinvested capital, income generation could further decline. Hence, we don't expect any growth in NII per share in the medium-term. As has been the case in the past several times, we expect further dividend cuts over the medium-term due to their barely sustainable levels. We

<sup>1</sup> Share count is in millions.

have embedded a -10% distribution decline on an annualized basis in our estimates as a result. Since 2019, the company has switched its distributions’ frequency from quarterly to monthly.

## Valuation Analysis

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	Now	2030
Avg. P/E	10.5	11.1	11.3	10.6	7.9	7.0	13.8	10.8	5.3	7.1	5.8	5.0
Avg. Yld.	18.3%	19.9%	11.2%	12.2%	12.9%	21.0%	9.5%	12.2%	20.2%	14.1%	22.8%	15.5%

As per its goal and obligation (as a Business Development Company) to distribute the largest chunk of its net income to shareholders, the stock’s yield has hovered around the mid-teens, averaging over 15% during the past decade. Despite management’s latest distribution slash to a monthly \$0.035 payout, the stock has declined enough to push the current yield to nearly 23%. We believe a valuation multiple of 5.0x adequately reflects the stock’s risk/reward profile. OXSQ is better valued through its book value, which currently stands at \$1.95, which is above than the stock’s price of \$1.84. This is likely because investors expect a continued decline in NAV at the current distribution rate. We remind that NAV/share stood at \$2.55, \$2.78, \$4.92, \$4.55, and \$5.12, in each of the past five years, respectively.

## Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2030
Payout	171%	221%	133%	118%	99%	153%	131%	100%	100%	100%	131%	78%

OXSQ’s payout ratio has often been above 100% over the years, as management has historically paid investors more than what the company earned. While the stock’s distribution yield has been seemingly attractive over the years, the company has been wiping an equal, and sometimes higher, amount from its NAV. Such a strategy could be sustained only via a gradually increased interest income. However, with total investment income declining over time amid a shrinking investment portfolio, we can hardly see any reversal from the current predicament. The ongoing shareholder value deterioration trend does not seem to be nearing an end-, at least not anytime soon. Overall, we believe that the company’s future investment income generation carries substantial risks, while a potential recession and an adverse economic environment could severely damage its interest income.

## Final Thoughts & Recommendation

Oxford Square Capital benefits from above-average yields, but it is likely to continue deteriorating shareholders’ equity value over the medium-term. Thus, another distribution reduction should not surprise investors. We see an annualized total return potential of 11.3% in the medium-term. This is because our weakening distribution estimates and a potential multiple contraction could offset the current yield. In any case, we rate the stock a sell due to the lack of dividend growth prospects. We highlight that income investors should not rely on Oxford Square’s distributions.
