Overview & Current Events

Oracle is an information technology company that provides software, hardware, and services. Its offerings include applications, platforms, and infrastructure technologies (cloud software), hardware products such as servers, hardware-related software products (e.g., operating systems) and services such as consultation & education. Oracle was founded in 1977, is headquartered in Redwood City, CA.

Oracle reported its most recent quarterly results, for its fiscal second quarter, in December. The company announced that it generated revenues of \$16.1 billion during the quarter, which represents an increase of 14% year over year. This was a little less than what was expected by the analyst community.

Oracle generated earnings-per-share of \$2.26 during the second quarter, which was up 54% versus the prior year's quarter, and which beat the consensus estimate easily. Oracle sees compelling growth tailwinds from the ongoing Artificial Intelligence revolution, with its cloud infrastructure revenues rising by a strong 68% during the quarter, and with its backlog and remaining performance obligations growing at a very strong pace: Remaining performance obligations were up by more than 400% , rising to more than \$500 billion. For the current fiscal year, Oracle is forecasted to earn significantly more compared to the previous fiscal year, at around \$7.35 per share, which would be up by double-digits compared to the previous year. Thanks to the huge bookings growth Oracle experiences, earnings growth will likely be appealing in the coming years, too.

Growth on a Per-Share Basis

Year	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2031
EPS	\$2.61	\$2.74	\$3.05	\$3.52	\$3.85	\$4.67	\$4.90	\$5.12	\$5.56	\$6.03	\$7.35	\$12.95
DPS	\$0.60	\$0.64	\$0.76	\$0.81	\$0.96	\$1.04	\$1.20	\$1.44	\$1.60	\$1.70	\$2.00	\$2.81
Shares¹	4.13	4.14	4.05	3.50	3.10	2.90	2.74	2.79	2.83	2.87	2.85	2.75

Oracle recorded compelling growth rates in the 2015-2025 time frame, with earnings-per-share growth averaging around 8% over that time frame. There were some ups and downs in Oracle's earnings, however, and growth was not very evenly distributed. Investments in its business to move it towards the software-as-a-service model were necessary, which led to somewhat uneven margins. The company fared well during the pandemic and during the Great Recession before that, indicating that Oracle's business isn't very cyclical.

Oracle is not operating a cloud business as large as its peers Amazon or Microsoft, but it still is generating attractive growth in the markets it addresses. Infrastructure-as-a-Service, as well as Platform-as-a-Service, are markets that are growing at a fast pace, and should allow Oracle to maintain an attractive cloud computing growth rate going forward. Oracle Fusion ERP and Oracle's Autonomous Database are touted by management as current and future growth drivers due to compelling pricing and top-tier technology. Cost reduction programs have also had a positive margin effect at times in the past, and the company could be able to improve its cost basis further in the future. Despite a high number of new shares being issued to employees and management, Oracle's share count has declined over the last decade. Thanks to cloud and AI tailwinds, we believe earnings growth will be compelling in the foreseeable future.

Valuation Analysis

Year	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	Now	2031
Avg. P/E	14.8	15.0	15.4	14.5	13.8	16.9	14.7	20.6	21.0	27.0	26.9	22.0
Avg. Yld.	1.6%	1.6%	1.5%	1.9%	1.8%	1.3%	1.7%	1.4%	1.4%	1.0%	1.0%	1.0%

Oracle's share price has declined since our last update, as enthusiasm waned versus the peak level seen in summer, but shares are still far from cheap. We would deem Oracle's shares fairly valued if they traded at 22 times net profits, with the premium versus the average over the last decade being justified by an improving growth outlook.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2031
Payout	23%	23%	25%	23%	25%	22%	24%	28%	29%	28%	27%	22%

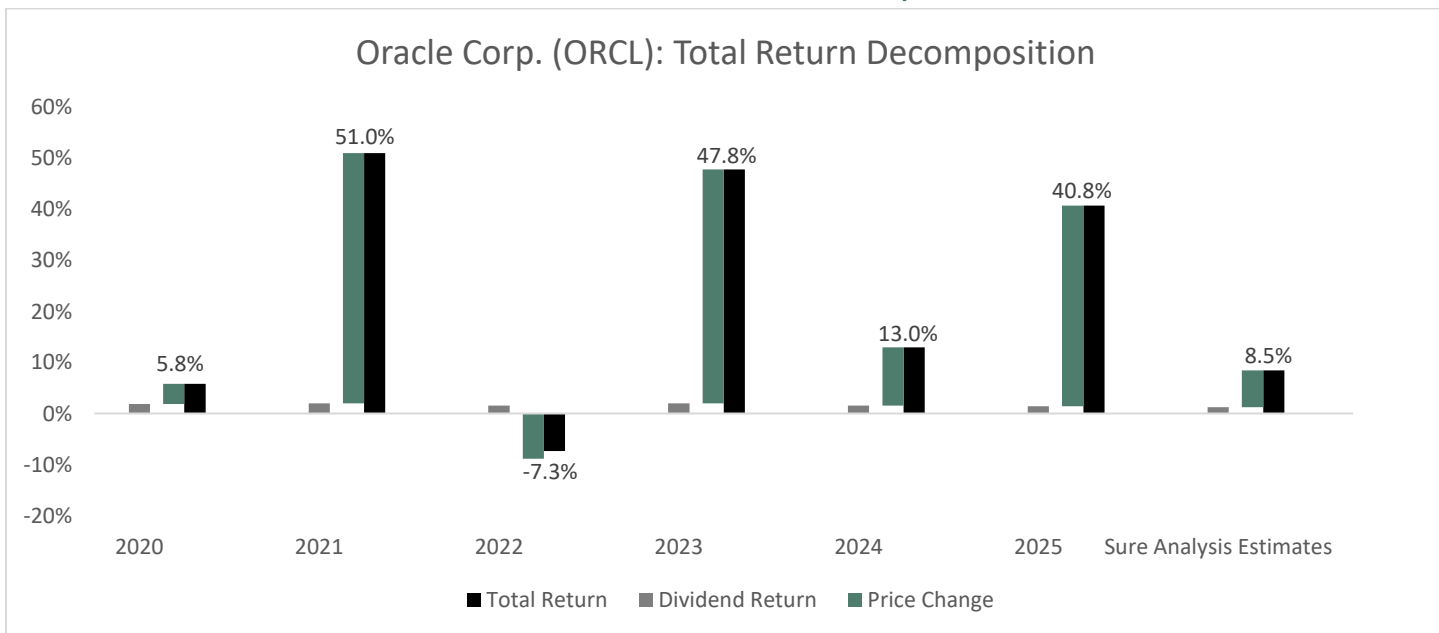

Oracle's dividend payout ratio was very low a decade ago, but since then the payout ratio has risen to some degree. At a payout ratio of less than 30%, the dividend is still very well-covered, and there is still a lot of room for further dividend increases. Due to the low payout ratio and the fact that the company was not impacted to a large degree during past crises, Oracle's dividend is rated safe.

Oracle was not hurt during the Great Recession, and the coronavirus pandemic did not have a large impact on Oracle's business, either. Oracle has some size and scale advantages over smaller peers, although it is itself a smaller player versus peers such as Microsoft in the cloud computing industry. Thanks to strong market-wide growth rates, all companies in this field can grow at the same time, which eases competitive pressures.

Final Thoughts & Recommendation

Oracle's shift towards cloud computing continues. Between revenue growth, strong cost controls, and buybacks, Oracle's earnings-per-share grew at a nice pace over the last decade, and thanks to AI tailwinds, growth could accelerate going forward. Oracle hit a new record profit in fiscal 2025, and fiscal 2026 will most likely be better as Oracle is forecasted to see its earnings-per-share improve meaningfully this year. Oracle's shares trade above our fair value estimate, however, which is why we rate Oracle a hold at current prices.
