Overview & Current Events

Permian Basin Royalty Trust (PBT), based in Dallas, Texas, is an oil and gas trust, which was founded in 1980. In 2025, about 57% of output was oil and 43% was gas, but 90% of revenues came from oil. PBT is a combination trust: unit holders have a 75% net overriding royalty interest in Waddell Ranch Properties in Texas, which includes several oil and gas wells; and a 95% net overriding royalty interest in the Texas Royalty Properties, which includes various oil wells.

The trust's assets are static in that no further properties can be added. The trust has no operations but is merely a pass-through vehicle for the royalties. PBT had royalty income of \$27.0 million in 2024 and \$11.6 million in 2025.

In late March, PBT reported (3/27/26) financial results for the full fiscal 2025. The average realized price of gas improved but the price of oil decreased significantly over the prior year. As a result, distributable income per unit decreased -43%, from \$0.54 to \$0.31.

After some months of disappointing distributions, which resulted from high operating expenses on the Waddell Ranch properties, PBT boosted its distributions in the last two months of 2023. However, it has reduced them again in recent months due to high operating expenses on the Waddell Ranch properties and lackluster prices of oil and gas. In the first three months of this year, PBT has offered total distributions of \$0.065 per unit, which correspond to a 1.2% annualized yield. We are concerned over the unreliable and volatile business performance of PBT.

Growth on a Per-Unit Basis

Year	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2031
DCFU	\$0.42	\$0.63	\$0.66	\$0.42	\$0.24	\$0.23	\$1.15	\$0.60	\$0.54	\$0.31	\$0.26	\$0.46
DPU	\$0.42	\$0.63	\$0.66	\$0.42	\$0.24	\$0.23	\$1.15	\$0.60	\$0.54	\$0.31	\$0.26	\$0.46
Units¹	46.6	46.6	46.6	46.6	46.6	46.6	46.6	46.6	46.6	46.6	46.6	46.6

Essentially all the royalty income the trust receives is passed through to unit holders. The trust has generated an average distributable and distributed cash flow of \$0.52/unit annually for the past 10 years, though with a noticeable decrease in 2015-2021. Given the natural decline of the production of oil wells and gas wells, the long-term downtrend in cash flows should be expected. The trust posted 10-year high distributable cash flow in 2022 thanks to the sanctions of western countries on Russia but gas prices have reverted to normal levels since 2023 due to high supply and unfavorable weather. The ongoing war in Iran is likely to result in much higher distributions in the upcoming months but we consider this tailwind short-lived, as we expect the war to end soon. Nevertheless, given the abnormally low comparison base in the first months of this year, we expect distributable cash flow to grow 12% per year on average over the next five years.

Valuation Analysis

Year	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	Now	2031
P/DCFU	15.8	14.4	13.2	13.6	13.3	23.9	14.5	37.1	22.2	44.5	84.6	13.0

Permian Basin Royalty Trust (PBT)

Updated April 1st, 2026 by Aristofanis Papadatos

The trust's DCFU price multiple has averaged 21.3 over the past 10 years. We assume a fair valuation multiple of 13.0 for the trust due to our natural expectations for declining production volumes in the long run. PBT is currently trading at a sky-high valuation multiple of 84.6 due to the abnormally low distributions so far this year. If PBT trades at our assumed fair valuation level in five years, it will incur a -31.2% annualized drag in its returns.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2031
Payout	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%

PBT has been in continuous existence for 46 years paying an average 5.6% yield in the last decade (albeit with high volatility in the distributions). However, future distributions are highly unpredictable due to the absence of any guidance and the unknown path of oil and gas prices. If the realized prices of oil and gas of PBT remain elevated, the trust will reward its unit holders with generous distributions. On the other hand, whenever the energy market enters another downturn, the trust is likely to exhibit poor performance.

Final Thoughts & Recommendation

After many quarters of disappointing distributions, which resulted from high operating expenses, PBT boosted its distributions in the last two months of 2023 but it has reduced them again in recent months. The trust is likely to benefit from the ongoing war in Iran, which will probably result in higher distributions in the upcoming months. However, we expect oil prices to revert to normal levels later this year due to the record number of renewable energy projects that are in their development phase and the decision of OPEC to restore its output. PBT has declined -19% off its peak in 2023 but it remains unattractive. PBT could offer an -18.7% average annual return over the next five years, as 12% growth of distributable income per unit and a 1.2% initial distribution may be offset by a -31.2% valuation headwind. As a result, PBT maintains its sell rating. We also reiterate that we do not believe PBT is a buy-and-hold-forever stock due to the natural decline of its production in the long run.
