Overview & Current Events

San Juan Basin Royalty Trust (SJT) is a medium sized gas trust (it produces a negligible amount of oil), set up in 1980 by Southland Royalty Company. The producing properties are all in northern New Mexico, in the San Juan Basin. They are currently operated by Hilcorp San Juan, L.P., which acquired the interests in 2017. The trust's assets are static in that no further properties can be added. The trust has no operations, but is merely a pass-through vehicle for the royalties. SJT had no royalty income in 2025 due to excessive production costs, and has a market capitalization of \$224 million.

In 2011, SJT had a remaining expected life of 9 years. We were unable to find a reported current estimated life for the trust (which is probably not a good sign). Moreover, due to the volatility of the price of natural gas, the trust revises its estimated reserves pronouncedly every year, as lower prices mean that some reserves are not economical to produce. As a result, it is essentially impossible to calculate the lifetime of reserves with any degree of precision.

In late March, SJT reported (3/27/2026) results for Q4-2025. Production of gas grew 19% and the price of gas surged 29% over the prior year's quarter but capital expenses increased significantly due to the drilling of two new horizontal wells. As a result, SJT did not pay any distributions. SJT has suspended its distributions since May-2024 due to excess operating costs and weak gas prices. It will resume distributions when costs moderate and gas prices grow. As production costs have somewhat decreased, SJT may resume distributions in late 2026.

Growth on a Per-Share Basis

Year	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2031
DCFU	\$0.299	\$0.840	\$0.386	\$0.174	\$0.159	\$0.77	\$1.66	\$1.11	\$0.11	---	\$0.10	\$0.31
DPU	\$0.299	\$0.840	\$0.386	\$0.174	\$0.159	\$0.77	\$1.66	\$1.11	\$0.11	---	\$0.10	\$0.31
Units²	46.6	46.6	46.6	46.6	46.6	46.6	46.6	46.6	46.6	46.6	46.6	46.6

Essentially all the royalty income (cash) the trust receives is passed through to unit holders. The trust has generated an average annual distributable and distributed cash flow of \$0.55 per unit for the past 10 years. However, distributions have been extremely volatile due to the dramatic swings of the price of natural gas. That's why the trust offers no guidance. The price of natural gas surged in December due to colder-than-normal temperatures but they have reverted to normal levels lately. In addition, they have not been affected by the ongoing war in Iran. Despite the natural decline of production of SJT in the long run, we expect distributable income per unit to grow 25% per year on average over the next five years due to a depressed comparison base this year. We do not expect a sustainable rebound of gas prices in the long run due to a record number of renewable energy projects underway.

Valuation Analysis

Year	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	Now	2031
P/DCFU	18.0	8.9	16.9	21.2	16.6	6.5	6.1	7.4	39.1	---	48.0	9.0
Avg. Yld.	5.6%	11.3%	5.9%	4.7%	6.0%	15.4%	16.3%	13.6%	2.6%	---	2.1%	11.1%

¹ Distributions have been suspended.

San Juan Basin Royalty Trust (SJT)

Updated April 1st, 2026 by Aristofanis Papadatos

SJT has traded at an average price-to-DCFU of 15.6 over the last decade. The trust is currently trading at an exceptionally high price-to-DCFU ratio of 48.0 due to depressed expected DCFU this year. Due to the natural decline of the production of SJT in the long run and the uncertainty over the lifetime of its reserves, we assume a fair price-to-DCFU of 9.0 for this trust. If SJT trades at this valuation level in five years, it will incur a -28.5% annualized drag in its returns.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2031
Payout	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%

SJT has been in continuous existence for 46 years and has offered an average 8.1% yield for the last 10 years (albeit with considerable volatility in the distributions). Having said that, it is impossible to forecast future distributions due to the dramatic swings of gas prices. SJT has proved highly vulnerable to the downturns of the energy market, as evidenced in 2015-2016 and 2020. It suspended its distribution for six months in 2019 and four months in 2020 due to low natural gas prices. It has suspended its distribution since 2024 as well due to high operating costs and modest gas prices. At high gas prices, the trust can extend its life, as it will have an incentive to apply ever-evolving technology to squeeze extra amounts of gas out of the fields. On the other hand, when the music begins to slow down on trusts (i.e., the end of reserves comes into view), or the market gets the slightest hint that the music will slow, the price of a unit can plummet overnight. And this particular trust has an operator that is not as clearly aligned with trust unit holder interests as one would like.

Final Thoughts & Recommendation

SJT offered blowout distributions in 2022-2023 due to the Ukrainian crisis but gas prices reverted to normal levels in 2024. Gas prices are unlikely to enjoy a sustained rally over the long run due to the execution of numerous renewable energy projects around the globe. SJT could offer a -4.7% average annual total return over the next five years, as its 2.1% potential distribution yield and 25% growth of distributable income may be offset by a -28.5% valuation headwind. SJT receives a sell rating. Even at more opportune stock prices, SJT is suitable only for the investors who can stomach the extreme volatility of gas prices and the resultant volatility of the stock price.
