Overview & Current Events

Genesis Energy is a diversified midstream energy limited partnership. It generates 69% of its operating income from offshore pipeline transportation, 14% from onshore facilities and 17% from marine transportation. It has a market capitalization of \$2.0 billion.

Genesis Energy has dramatically underperformed the market in the last decade, as shares have slumped -58% whereas the S&P has rallied 260%. The underperformance of Genesis Energy reflects its poor business performance. The MLP has spent hefty amounts on capital expenses but the performance of its investments has been poor. As a result, it has posted negative free cash flows in six out of the last ten years. Moreover, it has markedly increased its debt load, with its interest expense currently consuming 84% of its operating income. When some turnarounds and Hurricane Harvey adversely affected its results, the MLP was forced to cut its distribution by -31% in late 2017.

Even worse, Genesis Energy faced a fierce downturn in 2020-2021 due to the pandemic, which severely hurt the oil segment and the soda business. The MLP cut its quarterly distribution by -73% in 2020, from \$0.55 to \$0.15.

On March 3rd, 2025, Genesis Energy announced that it sold its soda ash operations to an affiliate of WE Soda for \$1.0 billion in cash. It used the proceeds to retire debt and preferred shares and thus it has strengthened its balance sheet. As the deal value is 50% of the current market cap of the stock and the divested business generated 34% of earnings, we view the deal as positive, particularly given our aversion of highly indebted companies.

In early May, Genesis Energy reported (5/7/26) financial results for the first quarter of fiscal 2026. The offshore pipeline segment grew its operating income 40% over the prior year's quarter thanks to improved volumes in two major platforms. Therefore, despite a -7% decrease in the operating income of the marine transportation segment, total operating income grew 29%. Distribution coverage ratio decreased sequentially from 2.8 to 2.0. The MLP reaffirmed its positive guidance for 2026 thanks to the expansion of Deepwater Gulf, expecting 15%-20% growth of EBITDA.

Growth on a Per-Share Basis

Year	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2031
DCF/U	\$2.81	\$2.52	-\$4.22	\$2.93	\$2.08	\$1.66	\$2.88	\$2.87	\$1.30	\$1.22	\$1.35	\$1.49
DPU	\$2.72	\$2.65	\$2.10	\$2.20	\$1.00	\$0.60	\$0.60	\$0.60	\$0.62	\$0.66	\$0.72	\$0.76
Shares²	113.4	121.5	122.6	122.6	122.6	122.6	122.6	122.5	122.5	122.5	122.5	150.0

Genesis Energy has failed to grow its DCF per unit consistently over the last decade, mostly due to its poor investments and the impact of the pandemic on its business. The MLP has net debt of \$3.7 billion, which is 185% of the current market cap, and a high leverage ratio (net debt/EBITDA) of 5.4. Due to its high leverage, the MLP was forced to sell a 36% stake in its CHOPS oil pipeline system in 2021 and used the proceeds to pay debt and become compliant with the requirements of its lenders. It sold its soda ash operations for the same reason last year. Given the outlook for lower capital expenses from this year, we expect 2.0% growth of DCF per unit on average until 2031. Part of this growth should

Genesis Energy (GEL)

Updated May 18th, 2026 by Aristofanis Papadatos

come from the deleveraging process, which will reduce interest expense to healthier levels. The choppy and poor growth record raises a red flag for the stock.

Valuation Analysis

Year	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	Now	2031
P/DCF	12.9	8.9	---	7.3	3.8	5.7	3.7	3.7	9.6	12.3	11.9	7.6
Avg. Yld.	8.1%	8.8%	9.4%	9.4%	12.5%	6.3%	5.6%	5.6%	5.0%	4.4%	4.5%	6.7%

Genesis Energy is trading at a P/DCF ratio of 11.9, which is much higher than the historical 9-year average of 7.6 of the stock. If the stock trades at its average valuation level in five years, it will incur an -8.5% annualized valuation drag.

Safety, Quality, Competitive Advantage, & Recession Resiliency

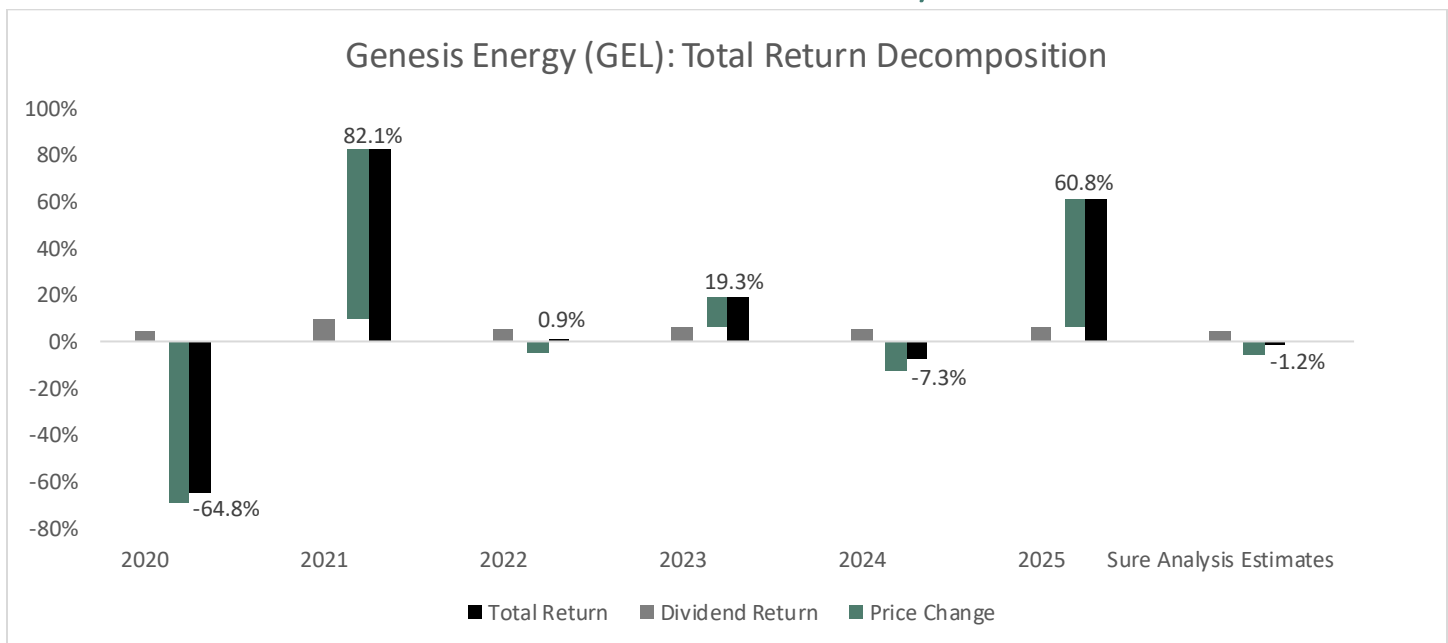

Year	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2031
Payout	66.2%	65.0%	38.2%	75.1%	48.0%	36.1%	20.8%	20.9%	47.7%	54.1%	53.3%	50.8%

Given the volatile and lackluster performance record of Genesis Energy, it is evident that there is no meaningful competitive advantage in place. While Genesis Energy operates primarily with a fee-based model, its earnings are not resilient. In our view, the MLP invested too heavily and increased its leverage too much in the past. As a result, the financial burden of its debt exerts a strong drag on its results through high interest expense and dilution of its unit holders. It also renders Genesis Energy highly vulnerable to any downturn in its business, such as a recession.

Final Thoughts & Recommendation

Due to its poor business performance and its high leverage, which has caused two major distribution cuts, Genesis Energy has dramatically underperformed the market in the last decade. The stock could offer a -1.2% average annual return over the next five years, as its 4.5% distribution and 2.0% growth of DCF per unit may be offset by an -8.5% valuation drag. The MLP has improved its business performance lately but it remains highly vulnerable in the event of a downturn, such as a recession. We rate the stock as a hold only for those who realize its risk and can stomach high stock price volatility.
