Overview & Current Events

Seacoast Banking Corporation of Florida is a bank holding company for the Seacoast National Bank. Through its operating companies, it provides integrated financial services to retail and commercial customers in Florida. The portfolio includes traditional products such as various deposit and savings accounts, as well as construction and land loans, commercial and residential real estate, automobiles, personal loans, and other related products. It also has a wealth management division, as well as insurance product lines. The company was founded in 1926 in Stuart, Florida, produces about \$850 million in annual revenue, and has a current market cap of \$3.3 billion.

Seacoast posted second quarter earnings on July 29th, 2026, and results were mixed. Adjusted earnings-per-share came to 61 cents, which was a penny ahead of estimates. However, while revenue rose 38% year-over-year to \$208.1 million, it missed estimates by almost \$2 million.

Total deposits were up 4% on an annualized basis in Q2, while cost of deposits fell to 1.53%. Net interest income was up 2% from the prior quarter and 42% from the year-ago period on acquisition strength. Net interest margin was stable at 3.83%, expanding eight basis points from the prior quarter.

Seacoast repurchased 752 thousand shares of stock during the quarter and 1.07 million year-to-date.

We have very slightly boosted our estimate of earnings to \$2.55 per share for this year on an adjusted basis, which would easily be a record, if achieved.

Growth on a Per-Share Basis

Year	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2031
EPS	\$0.81	\$0.99	\$1.38	\$1.90	\$1.44	\$2.18	\$1.66	\$1.23	\$1.42	\$1.83	\$2.55	\$3.25
DPS	\$0.00	\$0.00	\$0.00	\$0.00	\$0.00	\$0.39	\$0.64	\$0.71	\$0.72	\$0.73	\$0.76	\$0.84
Shares¹	38	43	49	52	54	57	64	84	85	89	93	110

We have boosted our growth estimate to 5% annually, which is reflective of the bank's uneven growth over the past decade, as well as the high estimated base for 2026. We note that this year will see a 20-year high in earnings if our estimate is achieved. We see an ever-rising share count as a headwind, although the bank does have a modest share repurchase program in place. Revenue growth should continue to be in the mid-single digits on a normalized basis, but much higher in 2026 due to the acquisition.

Seacoast ended 2025 with very strong loan portfolio growth, and good leverage on adjusted expenses. With merger costs declining very sharply this year, we should see more of that growth accrue to the bottom line. So long as credit quality remains intact, we think Seacoast is set up very well for 2026. We note non-lending revenue such as wealth management and insurance continue to grow nicely as well. These tend to be high-margin businesses, so growth in noninterest income is something shareholders should keep an eye on.

Valuation Analysis

Year	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	Now	2031
Avg. P/E	20.5	24.0	20.6	14.1	15.5	15.9	20.3	20.0	18.2	15.4	13.7	16.0
Avg. Yld.	0.0%	0.0%	0.0%	0.0%	0.0%	1.1%	1.9%	2.9%	2.8%	2.6%	2.2%	1.6%

The valuation has been quite elevated for some time based on our coverage universe of regional banks. Today, the valuation has risen to 13.7 on a strong rally in the stock. While the average P/E ratio is just above 18, we set fair value at 16 times earnings, reflecting the bank's strong forward outlook, but also peer valuations.

The dividend is yielding 2.2% today, about double that of the S&P 500. We see it falling over time because recent dividend growth has been modest, while we expect a higher valuation and higher earnings, both of which would drive the yield lower.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2031
Payout	0%	0%	0%	0%	0%	18%	39%	58%	51%	40%	30%	26%

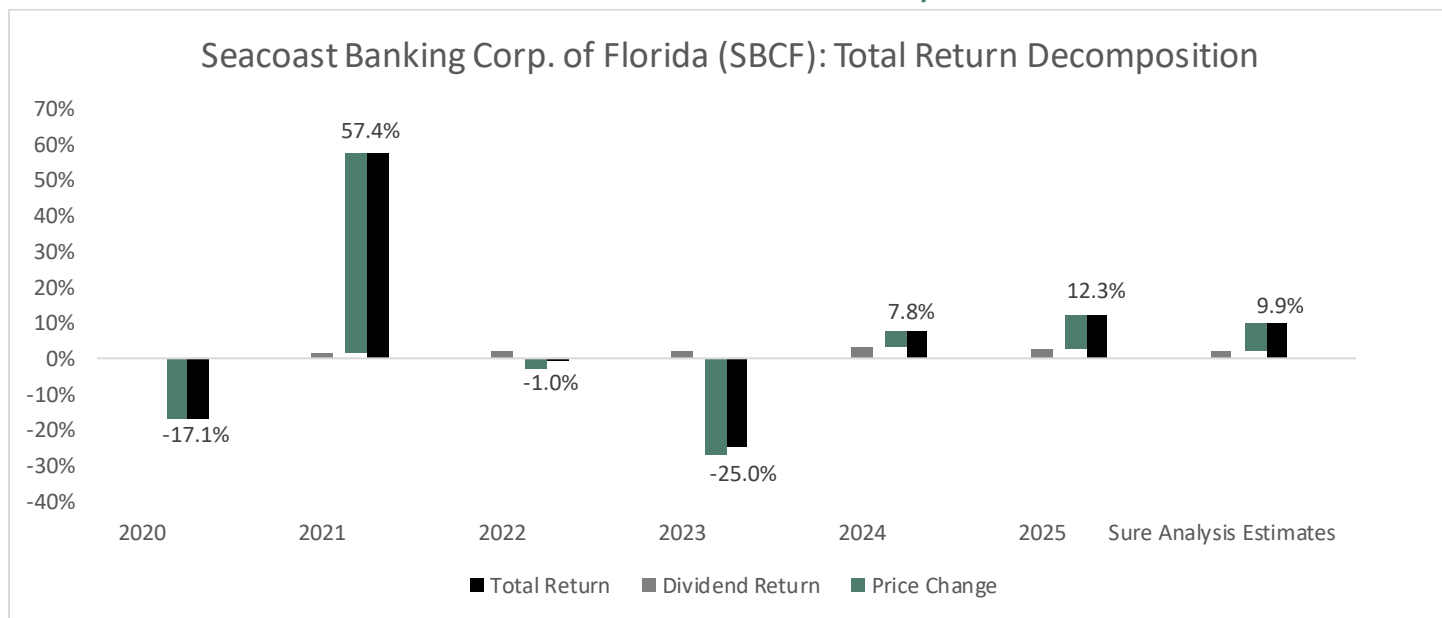

The payout ratio is quite manageable at 30%, and we see it remaining around that level for the foreseeable future, meaning Seacoast should not need to cut the payout except in the most extreme recession scenario.

Speaking of recessions, Seacoast had its earnings decimated during the Great Recession, falling from \$6.39 per share in 2006 to a loss of \$18.21 per share in 2009. Cumulative earnings-per-share for that four-year period were -\$20.37, highlighting that investors should keenly watch for signs of slowdowns in Seacoast's businesses. Indeed, for 2008 and 2009 combined, Seacoast lost more than \$30 per share, and it took several years before the bank was solidly profitable again. As a regional bank, we don't see any meaningful competitive advantages for Seacoast.

Final Thoughts & Recommendation

We see 9.9% total annual returns looking forward, consisting of the 2.2% yield, 5% growth, and a modest tailwind from the valuation. We note very high risk of earnings declines in recessions, but a cheap valuation and a safe yield that is double that of the S&P 500. Seacoast is reiterated at a hold rating.
